## Revisions

Refer to page 266 for the catalogue revision index. Visit [www.bonfiglioli.com](http://www.bonfiglioli.com) to search for catalogues with up-to-date revisions.

## GENERAL INFORMATION

### 1 SYMBOLS AND UNITS OF MEASUREMENT

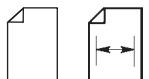

Symbols	Units of Measure	Description	Symbols	Units of Measure	Description
$A_{N\ 1,\ 2}$	[N]	Permissible axial force	$n_{1,\ 2}$	[min <sup>-1</sup> ]	Speed
$f_s$	—	Service factor	$P_{1,\ 2}$	[kW]	Power
$f_T$	—	Thermal factor	$P_{N\ 1,\ 2}$	[kW]	Rated power
$f_{TP}$	—	Temperature factor	$P_{R\ 1,\ 2}$	[kW]	Power demand
$i$	—	Gear ratio	$R_{C\ 1,\ 2}$	[N]	Calculated radial force
$I$	—	Cyclic duration factor	$R_{N\ 1,\ 2}$	[N]	Permissible overhung load
$J_C$	[Kgm <sup>2</sup> ]	Mass moment of inertia to be driven	$s$	—	Safety factor
$J_M$	[Kgm <sup>2</sup> ]	Motor mass moment of inertia	$t_a$	[°C]	Ambient temperature
$J_R$	[Kgm <sup>2</sup> ]	Mass moment of inertia for the gear unit	$t_f$	[min]	Work time under constant load
$K$	—	Mass acceleration factor	$t_r$	[min]	Rest time
$K_r$	—	Transmission element factor	$\eta_d$	—	Dynamic efficiency
$M_{1,\ 2}$	[Nm]	Torque	$\eta_s$	—	Static efficiency
$M_{c\ 1,\ 2}$	[Nm]	Calculated torque			
$M_{n\ 1,\ 2}$	[Nm]	Rated torque			
$M_{r\ 1,\ 2}$	[Nm]	Torque demand			

<sub>1</sub> value applies to input shaft

<sub>2</sub> value applies to output shaft

This symbol indicates situations of danger which, if ignored, may result in risks to personal health and safety.

The symbol shows the page the information can be sorted from.

This symbol refers to the angle the overhung load applies (viewing from drive end).

Symbol refers to weight of gearmotors and speed reducers. Figure for gearmotors incorporates the weight of the 4-pole motor and for life lubricated units, where applicable, the weight of the oil.

## 2 DEFINITIONS

### 2.1 TORQUE

#### Rated torque $M_{n2}$ [Nm]

The torque that can be transmitted continuously through the output shaft, with the gear unit operated under a service factor  $f_s = 1$ .

Rating is speed sensitive.

#### Required torque $M_{r2}$ [Nm]

The torque demand based on application requirement. It is recommended to be equal to or less than torque  $M_{n2}$  the gearbox under study is rated for.

#### Calculated torque $M_{c2}$ [Nm]

Computational torque value to be used when selecting the gearbox.

It is calculated considering the required torque  $M_{r2}$  and service factor  $f_s$ , as per the relationship here after:

$$M_{c2} = M_{r2} \times f_s \leq M_{n2} \quad (1)$$

### 2.2 POWER

#### Rated input power $P_{n1}$ [kW]

The parameter can be found in the gearbox rating charts and represents the kW that can be safely transmitted to the gearbox, based on input speed  $n_1$  and service factor  $f_s = 1$ .

## 2.3 EFFICIENCY

### Dynamic efficiency [ $\eta_d$ ]

The dynamic efficiency is the relationship of power delivered at output shaft  $P_2$  to power applied at input shaft  $P_1$ :

$$\eta_d = \frac{P_2}{P_1} \quad (2)$$

It may be worth highlighting that values of rated torque  $M_{h2}$  given in the catalogue take the dynamic efficiency into consideration. Values of  $\eta_d$  are calculated for gearboxes after a sufficiently long running-in period.

After the running-in period the surface temperature in operation reduces and finally stabilises.

The operating temperature is affected by both the duty and the ambient temperature and may result into values, measured onto the gear case in the area of the worm shaft, in the range of 80-100 °C without this affecting the operation of the gear unit adversely. If however, surface temperatures in the 90-100 °C range are to be expected it is recommended that oil seals in Fluoro elastomer compound are specified at the time of order through option **PV**.

### Static efficiency [ $\eta_s$ ]

Efficiency applicable at start-up of the gearbox. Although this is generally not a significant factor for helical gears, it may be instead critical when selecting worm gearmotors operating under intermittent duty (e.g. Hoisting).

## 2.4 GEAR RATIO [ i ]

The value for the gear ratio is referred to with the letter [ i ] and calculated through the relationship of the input speed  $n_1$  to the output speed  $n_2$ :

$$i = \frac{n_1}{n_2} \quad (3)$$

## 2.5 MOMENT OF INERTIA $J_r$ [kgm<sup>2</sup>]

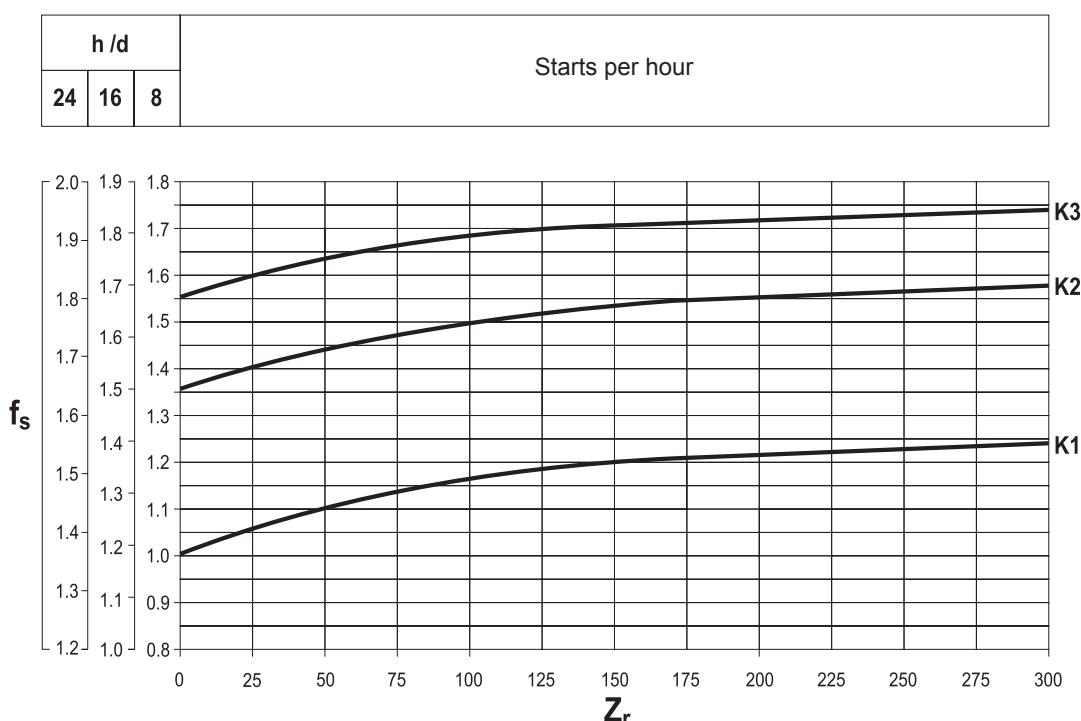

Moments of inertia specified in the catalogue refer to the input shaft of the gear unit and, as such, they can be simply added to the inertia of the motor, when this is combined.

## 2.6 SERVICE FACTOR [ $f_s$ ]

This factor is the numeric value describing reducer service duty. It takes into consideration, with unavoidable approximation, daily operating conditions, load variations and overloads connected with reducer application. In the graph below, after selecting proper “daily working hours” column, the service factor is given by intersecting the number of starts per hour and one of the K1, K2 or K3 curves. K<sub>r</sub> curves are linked with the service nature (approximately: uniform, medium and heavy) through the acceleration factor of masses K, connected to the ratio between driven masses and motor inertia values. Regardless to the value given for the service factor, we would like to remind that in some applications, which for example involve lifting of parts, failure of the reducer may expose the operators to the risk of injuries.

If in doubt, please contact Bonfiglioli's Technical Service.

### Acceleration factor of masses, [ K ]

This parameter serves for selecting the right curve for the type of load. The value is given by the following ratio:

$$K = \frac{J_c}{J_m}$$

(4)

$K = \frac{J_c}{J_m}$	<p><math>J_c</math> = Moment of inertia of driven masses referred to motor drive shaft</p> <p><math>J_m</math> = Motor moment of inertia</p>	<p><b><math>K \leq 0,25</math></b> → K1 Uniform load</p> <p><b><math>0,25 &lt; K \leq 3</math></b> → K2 Moderate shock load</p> <p><b><math>3 &lt; K \leq 10</math></b> → K3 Heavy shock load</p> <p><b><math>K &gt; 10</math></b> → please contact Bonfiglioli's Technical Service</p>
-----------------------	--	---

### 3 MAINTENANCE

Life lubricated gearboxes do not require any periodical oil changes.

For other types of gearboxes, the oil must be first changed after approx. 300 hours of operation, carefully flushing the gear unit using suitable detergents.

Do not mix mineral oils with synthetic oils.

Check oil level regularly and change oil at the intervals shown in the table.

Oil temperature [°C]	Oil change interval [h]	
	mineral oil	synthetic oil
< 65	8000	25000
65 - 80	4000	15000
80 - 95	2000	12500

### 4 SELECTION

#### 4.1 Selecting a gearmotor

a) Determine service factor  $f_s$  as formerly specified.

b) Determine power required at gearbox input shaft:

$$P_{r1} = \frac{M_{r2} \times n_2}{9550 \times \eta_d} \quad [\text{kW}] \quad (5)$$

c) Consult the gearmotor rating charts and locate the table corresponding to normalised power  $P_n$ :

$$P_n \geq P_{r1} \quad (6)$$

Unless otherwise specified, power  $P_n$  of motors indicated in the catalogue refers to continuous duty S1.

For motors used in conditions other than S1, the type of duty required by reference to CEI 2-3/IEC 34-1 Standards must be mentioned. For duties from S2 to S8 in particular and for motor frame 132 or smaller, extra power output can be obtained with respect to continuous duty.

Accordingly the following condition must be satisfied:

$$P_n \geq \frac{P_{r1}}{f_m} \quad (7)$$

The adjusting factor  $f_m$  can be obtained from table here after.

#### Intermittence ratio

$$I = \frac{t_f}{t_f + t_r} \times 100 \quad (8)$$

$t_f$  = work time at constant load

$t_r$  = rest time

	DUTY						
	S2			S3*			S4 - S8
	Cycle duration [min]			Cyclic duration factor (I)			Please contact us
	10	30	60	25%	40%	60%	
$f_m$	1.35	1.15	1.05	1.25	1.15	1.1	

\* Cycle duration, in any event, must be 10 minutes or less. If it is longer, please contact our Technical Service.

Next, refer to the appropriate  $P_n$  section within the gearmotor selection charts and locate the unit that features the desired output speed  $n_2$ , or closest to, along with a safety factor  $S$  that meets or exceeds the applicable service factor  $f_s$ .

$$S \geq f_s \quad (9)$$

The safety factor is so defined:

$$S = \frac{M_{n2}}{M_2} = \frac{P_{n1}}{P_1} \quad (10)$$

As standard, gear and motor Combinations are implemented with 2, 4 and 6 pole motors, 50 Hz supplied.

Should the drive speed be different from 2800, 1400 or 900 min<sup>-1</sup>, base the selection on the gear unit nominal rating.

#### 4.2 Selecting a speed reducer

a) Determine service factor  $f_s$ .

b) Determine the computational torque  $M_{c2}$ :

$$M_{c2} = M_{r2} \times f_s \quad (11)$$

c) Determine the required gear ratio:

$$i = \frac{n_1}{n_2} \quad (12)$$

d) Consult the «Speed reducer rating charts» and locate the frame size that, for drive speed  $n_1$  and gear ratio closest to [i] features a rated torque  $M_{n2}$  that satisfies the following condition:

$$M_{n2} \geq M_{c2} \quad (13)$$

Check applicability of the electric motor selected at chapter: «Motor availability».

## 5 VERIFICATION

After the selection of the speed reducer, or gearmotor, is complete it is recommended that the following verifications are conducted:

a) Maximum torque

The maximum torque (intended as instantaneous peak load) applicable to the gearbox must not, in general, exceed 300% of rated torque  $M_{n2}$ . Therefore, check that this limit is not exceeded, using suitable torque limiting devices, if necessary. For three-phase switch-pole motors, it is recommended to pay attention to the switching torque which is generated when switching from high to low speed, because it could be significantly higher than maximum torque.

A simple, economical way to minimize overloading is to power only two phases of the motor during switch-over (power-up time on two phases can be controlled with a time-relay):

Switching torque	
$Mg_2 = 0.5 \times Mg_3$	
$Mg_2$	Switching torque with two phase power-up
$Mg_3$	Switching torque with three-phase power-up

b) Radial loads

Make sure that radial forces applying on input and/or output shaft are within permitted catalogue values. If they were higher consider designing a different bearing arrangement before switching to a larger gear unit.

Catalogue values for rated overhung loads refer to mid-point of shaft under study.

Should application point of the overhung load be localised further out the revised loading capability must be adjusted as per instructions given in this manual.

c) Thrust loads

Actual thrust load must be found within 20% of the equivalent overhung load capacity.

Should an extremely high thrust, or a combination of radial and axial load apply, consult Bonfiglioli Technical Service.

d) Starts per hour

For duties featuring a high number of switches the actual starting capability in loaded condition [Z] must be calculated.

Actual number of starts per hour must be lower than value so calculated.

## 6 INSTALLATION

### 6.1 General instructions

a) Make sure that the gearbox is securely bolted to avoid vibrations in operation. If shocks or overloads are expected, fit hydraulic couplings, clutches, torque limiters, etc.

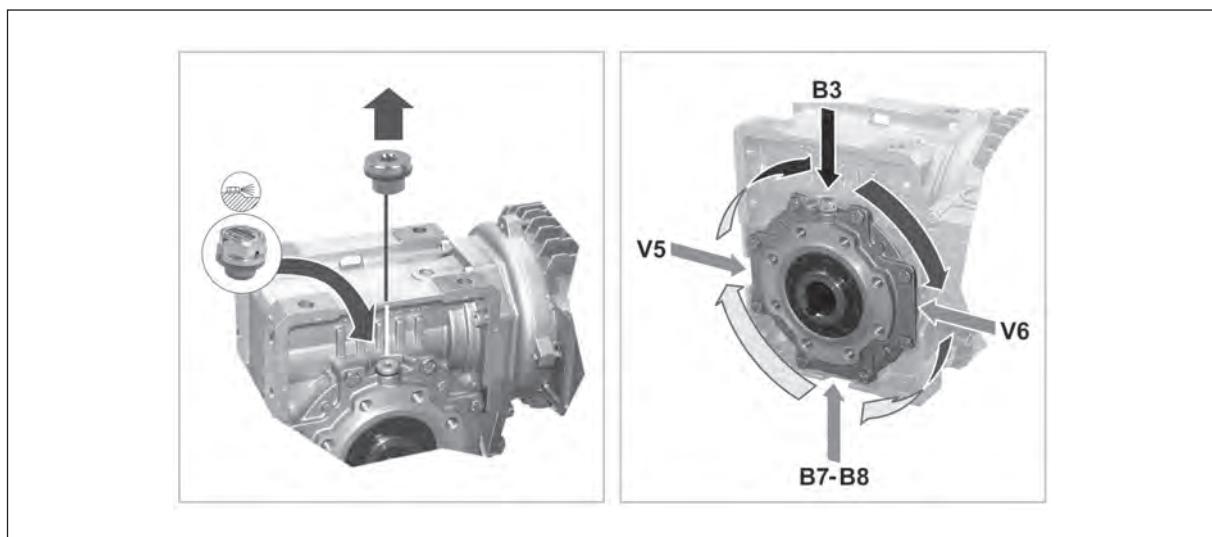

- b) Before being paint coated, any machined surfaces and the outer face of the oil seals must be protected to prevent paint drying out the rubber and jeopardising the sealing function.
- c) Parts fitted on the gearbox output shaft must be machined to ISO H7 tolerance to prevent interference fits that could damage the gearbox itself. Further, to mount or remove such parts, use suitable pullers or extraction devices using the tapped hole located at the top of the shaft extension.
- d) Mating surfaces must be cleaned and treated with suitable protective products before mounting to avoid oxidation and, as a result, seizure of parts.
- e) Prior to putting the gear unit into operation make sure that the equipment that incorporates the same complies with the current revision of the Machines Directive 2006/42/CE.
- f) Before starting up the machine, make sure that oil level is suitable for the mounting position specified for the gear unit and the viscosity is adequate.
- g) For outdoor installation provide adequate guards in order to protect the drive from rainfalls as well as direct sun radiation.

## 6.2 Commissioning of W gear units

Gear units type W63, W75 and W86 feature a side cover carrying a blank plug for transportation purposes.

Prior to putting the gearbox into service the blank plug must be replaced by the breather plug that is supplied with each unit.

See figure below:

**Note that the blind plug MUST BE LEFT IN PLACE when the reducer is fitted in mounting position B6.**

## 7 STORAGE

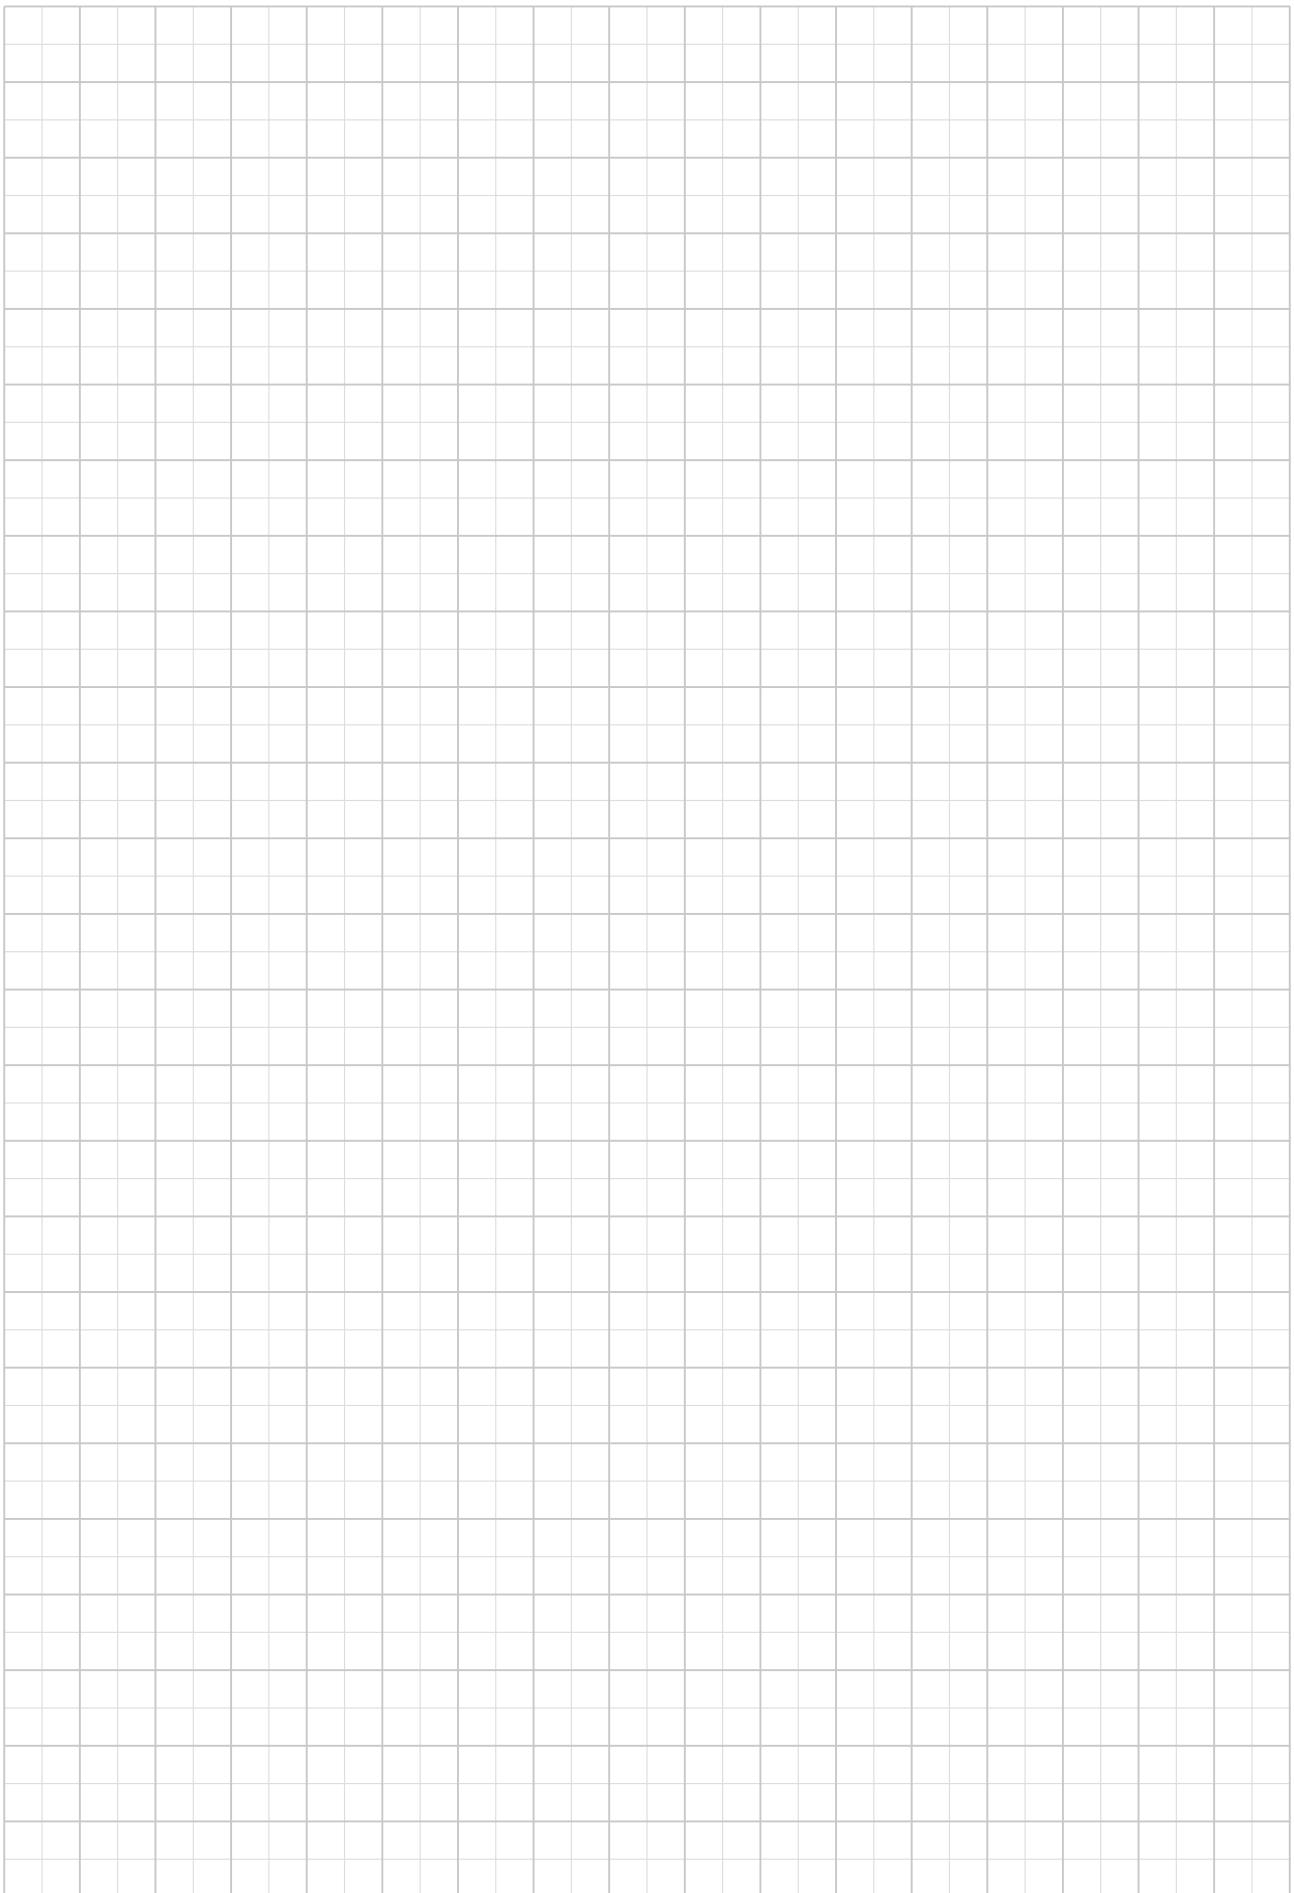

Observe the following instructions to ensure correct storage of the products:

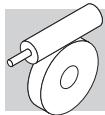

- a) Do not store outdoors, in areas exposed to weather or with excessive humidity.
- b) Always place boards, wood or other material between the products and the floor.  
The gearboxes should not have direct contact with the floor.
- c) In case of long-term storage all machined surfaces such as flanges, shafts and couplings must be coated with a suitable rust inhibiting product (Mobilarma 248 or equivalent).  
Furthermore gear units must be placed with the fill plug in the highest position and filled up with oil.  
Before putting the units into operation the appropriate quantity, and type, of oil must be restored.

## 8 CONDITIONS OF SUPPLY

Gear units are supplied as follows:

- a) configured for installation in the mounting position specified at the time of order;
- b) tested to manufacturer specifications;
- c) mating machined surfaces come unpainted;
- d) nuts and bolts for mounting motors are provided;
- e) shafts are protected during transportation by plastic caps;
- f) supplied with lifting lug (where applicable).

## WORMGEARS

### 9 DESIGN FEATURES

#### 9.1 Key features common to all Bonfiglioli worm gears

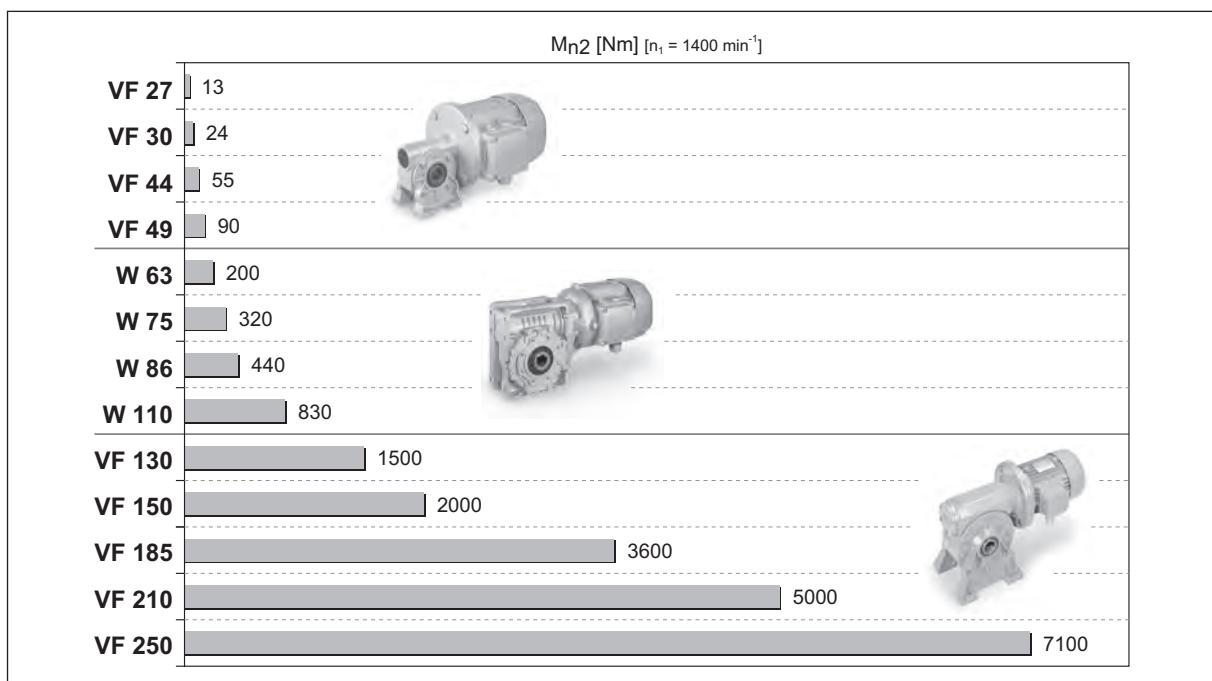

- Symmetrical hollow output shaft for facilitated mounting of the gear unit and plug-in shafts (after-sales kit only) on either side.
- Ground finished wormshafts and precise machining lend optimal efficiency and extremely low noise in operation.
- Numerous product configurations allow for foot, flange or shaft mounting. Torque arm is available as an option.
- Extensive customisation possible through the range of standard options available.

#### 9.2 Key features of VF-style worm gears

- Die cast aluminium gear cases for VF27, VF30, VF44 and VF49. Sturdy cast iron for VF130 through VF250. The latter group is paint coated with thermo setting epoxy powder.

#### 9.3 Key features of W-style worm gears

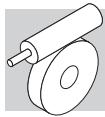

- Rigid monobloc gear case made from Aluminium.
- The cubic shape of the gear case and machining of all sides lend extreme flexibility for the installation of the gearbox and ancillary devices.
- The integral gearmotor configuration is lightweight, compact and price effective.
- Input shaft oil seal of W63, W75 and W86 units is located internally, and made from a Fluoro elastomer compound for improved durability and extended lifetime.

## 10 VERSIONS

## 13 GEARBOX OPTIONS

### SO

Gear units VF 30 ... VF 49, W 63 ... W 86, usually factory filled with oil, are, in this case, supplied unlubricated.

### LO

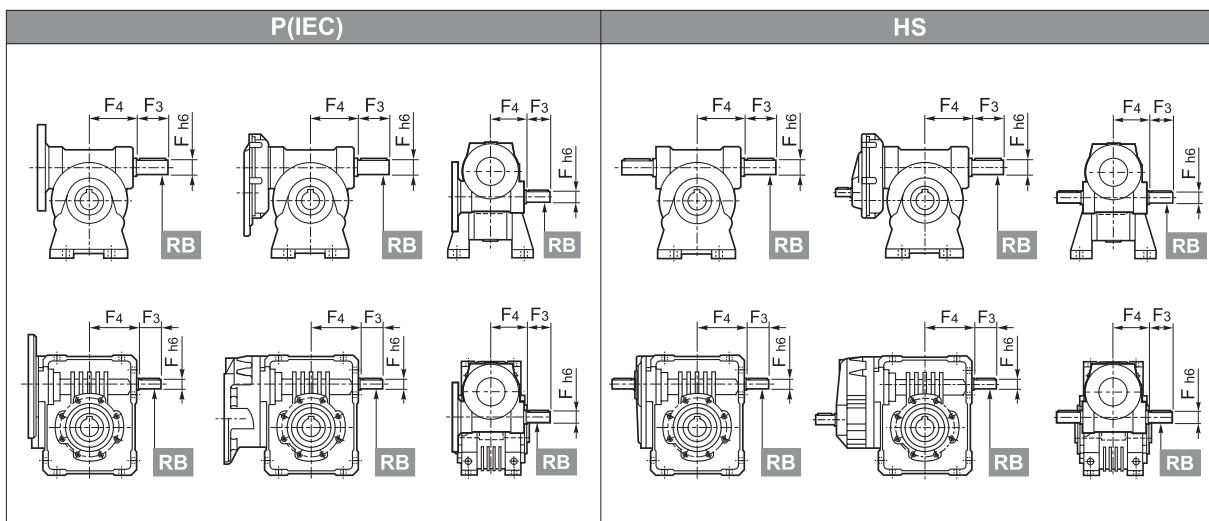

Gearboxes VF 130...VF 250 and W 110, usually supplied unlubricated, to be filled with synthetic oil currently used by BONFIGLIOLI RIDUTTORI according to the mounting position specified.

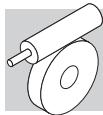

The applicability of the LO option is described in the table below.

	LO					
	Mounting position					
	B3	B6	B7	B8	V5	V6
<b>W 110 U-UF-UFC</b>	X	X	X	X	⊖	⊖
<b>VF 130 A-N-P-F-FC</b>	X	X	X	X	⊖	⊖
<b>VF 130 V</b>	⊖	X	X	⊖	X	X
<b>VF 130 FR</b>	X	⊖	⊖	X	⊖	⊖

<b>VF 250 A-N-P</b>	X	⊖	⊖	X	⊖	⊖
<b>VF 250 V</b>	⊖	⊖	⊖	⊖	X	X

### RB

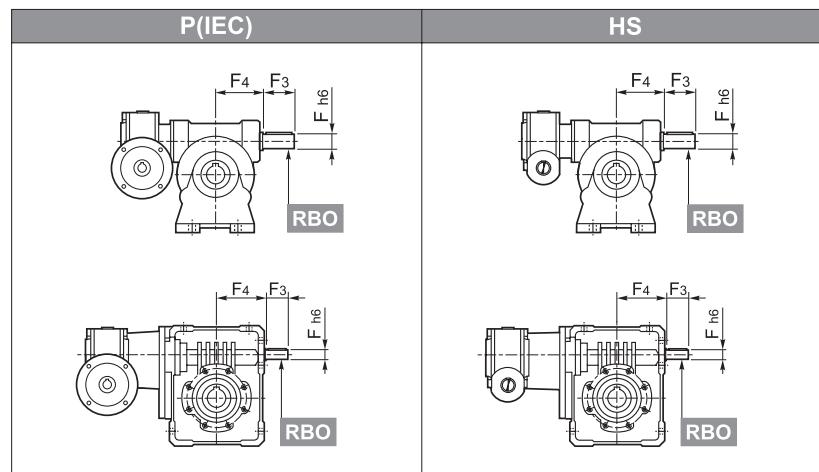

Double-ended input shaft at non-drive- end (with the exception of VF 27).

## RBO

Double-ended input shaft at N.D.E. of 2nd gearbox (combined execution only)

Extended input shaft dimensions (options RB and RBO)						
	F	F1	F2	F3	F4	V
VF 30	9	10.2	3	20	50	—
VFR 44	11	12.5	4	30	56	—
VF/VF 49	16	18	5	40	65	M6
W 63	18	20.5	6	40	74	M6
WR 75	19	21.5	6	40	88.5	M6
VF/W 86	25	28	8	50	101.5	M8
W 110	25	28	8	60	127.5	M8
VF 130	30	33	8	60	160	M8
VFR 150	35	38	10	65	185	M8
VFR 185	40	43	12	70	214.5	M8
W/VF 210	48	51.5	14	82	185	M16x40
VF 250	55	59	16	82	228	M16x40

**VF 44, VFR 44**

**A** and **P** versions of VF 210 and VF 250 feature the fan cooling as a standard, however forced ventilation is not feasible should the **RB** option be specified.

## VV

Fluoro elastomer oil seal on input shaft. The option is available for W110 and for units of the VF series, barring all VF 30's c/w option RB and VF 30\_HS.

## PV

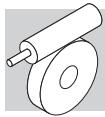

Oil seals from Fluoro elastomer compound on both the input and the output shaft, barring all VF 30's c/w option RB and VF 30\_HS.

## KA

VF\_A interchangeability kit. Option is available for units W 63 to W 110.

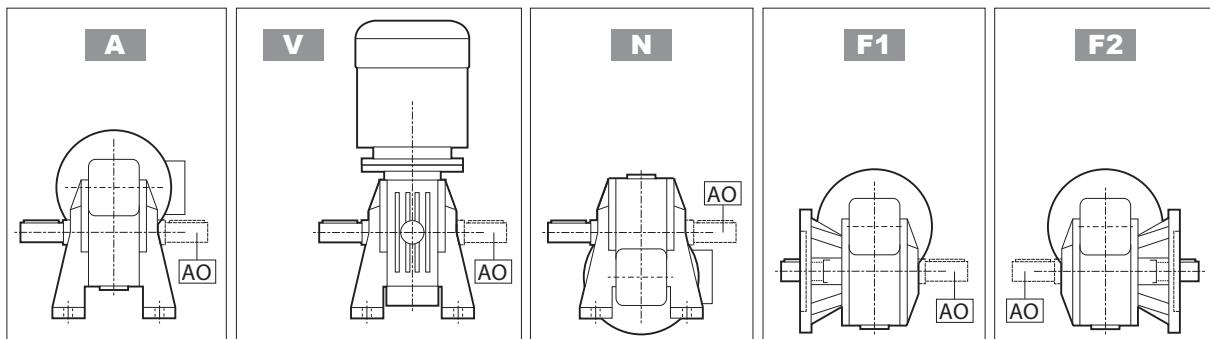

## KV

VF\_V interchangeability kit (barring W + option RB). Option is available for units W 63 to W 110.

## AO

Output shaft on side opposite to standard (VF 27).

## SURFACE PROTECTION

When no specific protection class is requested, the painted (ferrous) surfaces of gearboxes are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, gearboxes can be delivered with **C3** and **C4** surface protection, obtained by painting the complete gearbox.

SURFACE PROTECTION	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
<b>C3</b>	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
<b>C4</b>	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

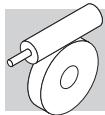

Gearboxes with optional protection to class **C3** or **C4** are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) gearboxes are finished in RAL 7042. Gearboxes can also be supplied with surface protection for corrosivity class **C5** according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

## PAINTING

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

PAINTING	Colour	RAL number
<b>RAL7042*</b>	Traffic Grey A	7042
<b>RAL5010</b>	Gentian Blue	5010
<b>RAL9005</b>	Jet Black	9005
<b>RAL9006</b>	White Aluminium	9006
<b>RAL9010</b>	Pure White	9010

\* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE – “PAINTING” options can only be specified in conjunction with “SURFACE PROTECTION” options.

## CERTIFICATES

### AC - Certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

### CC - Inspection certificate

The document entails checking on order compliance, the visual inspection of external conditions and of mating dimensions. Checking on main functional parameters in unloaded conditions is also performed along with oil seal proofing, both in static and in running conditions. Units inspected are sampled within the shipping batch and marked individually.

### Motor options

For more detailed information please consult the Electric Motor section in this book.

## 14 LUBRICATION

### 14.1 Lubrication for W and VF

Frame sizes VF 27 ... VF 49, W 63 ... W 86 are supplied by the factory, or by authorized dealers, already filled with “long life” synthetic oil. On request, these units can be supplied unlubricated, in which case, the option **SO** must be specified on the order. The applicability of the option is described in the chapter “GEARBOX OPTIONS”.

Unless otherwise specified, units type VF 130 ... VF 250 and W 110 are generally supplied unlubricated at it is the customer’ responsibility to fill them with oil prior to putting them into operation. By requesting the **LO** option at the time of order, these units will be factory filled with synthetic lubricant in the quantity relevant to the mounting position that was specified in the purchase order. The applicability of the option is described in the chapter “GEARBOX OPTIONS”.

Double worm gears type VF/VF, VF/W and W/VF consist of two separate units, independently lubricated.

For the reference charts of oil plugs placement and quantity of lubricant, refer to the Installation, Operation and Maintenance Manual (available on [www.bonfiglioli.com](http://www.bonfiglioli.com)).

In the absence of contamination, the “long life” synthetic lubricant supplied by the factory, does not require periodical changes throughout the lifetime of the gear unit.

Operation of gear units is permitted at ambient temperatures between -20°C and +40°C. However, for temperatures between -20°C and -10°C unit may only start up after it has been progressively and evenly pre-heated, or otherwise initially operated unloaded.

Load may then be connected to the output shaft when the gear unit has reached the temperature of -10°C, or higher.

## 14.2 Type of lubricant

When using a lubricant other than the recommended SHELL lubricant, be sure it is a synthetic lubricant with equivalent viscosity and composition and added with adequate anti-foaming agents.

For the chart of recommended/permitted lubricants refer to the Installation, Operation and Maintenance Manual (available on [www.bonfiglioli.com](http://www.bonfiglioli.com)).

## 15 MOUNTING POSITION AND TERMINAL BOX ANGULAR LOCATION

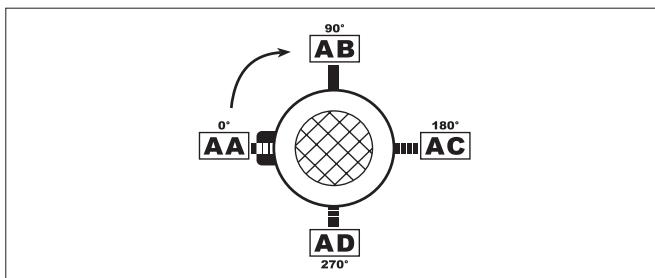

Location of motor terminal box can be specified by viewing the motor from the fan side; standard location is shown in black (W).

The terminal box positions indicated do not apply to VFR 44. Please refer to page 19 and pages 114-115 for designation and identification of design version.

**Angular location of the brake release lever.**

Unless otherwise specified, brake motors have the manual device side located, 90° apart from terminal box.

Different angles can be specified through the relevant options available.

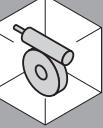

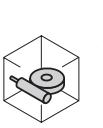

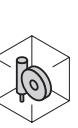

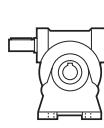

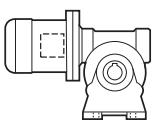

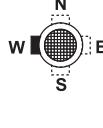

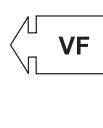

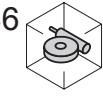

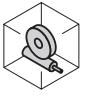

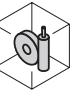

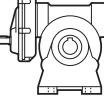

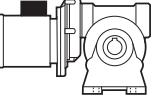

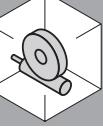

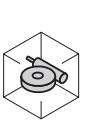

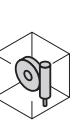

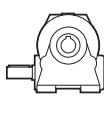

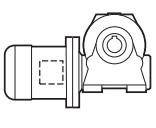

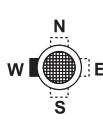

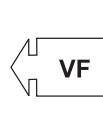

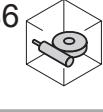

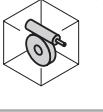

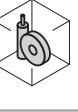

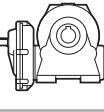

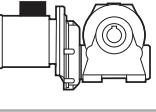

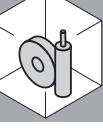

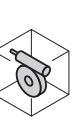

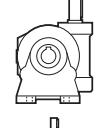

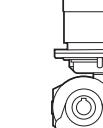

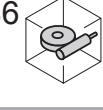

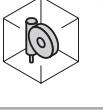

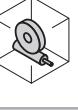

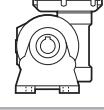

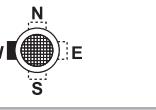

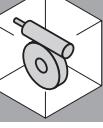

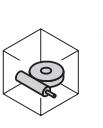

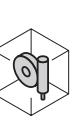

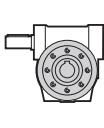

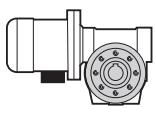

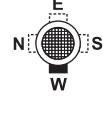

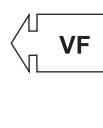

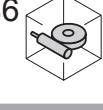

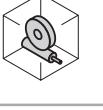

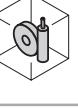

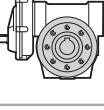

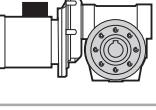

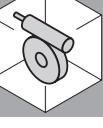

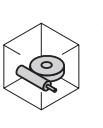

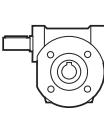

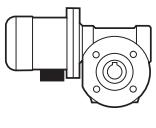

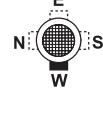

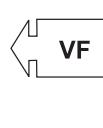

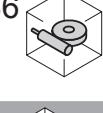

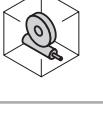

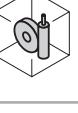

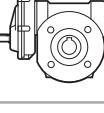

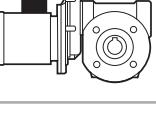

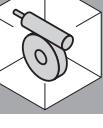

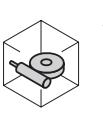

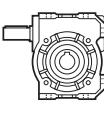

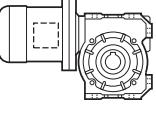

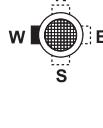

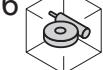

The following pages describe the mounting positions of VF and W series gearboxes.

In the case of VF/VF, VF/W and W/VF gearbox combinations, mounting positions refer to the second (machine side) gearbox. Refer to the "Mounting version" chapter for details of the first (input side) gearbox.

## 16 OVERHUNG LOADS

### 16.1 Calculating the resulting overhung load

External transmissions keyed onto input and/or output shaft generate loads that act radially onto same shaft.

Resulting shaft loading must be compatible with both the bearing and the shaft capacity.

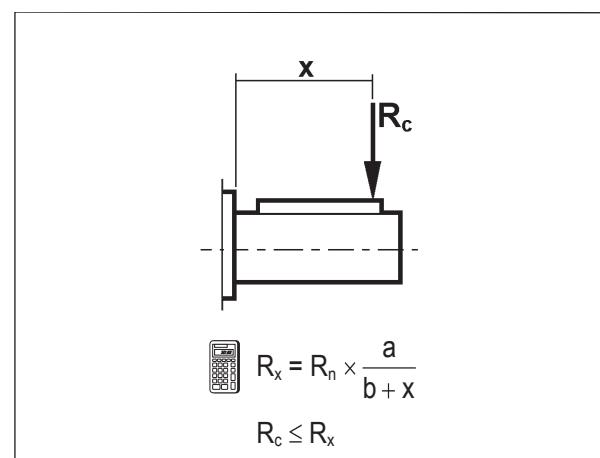

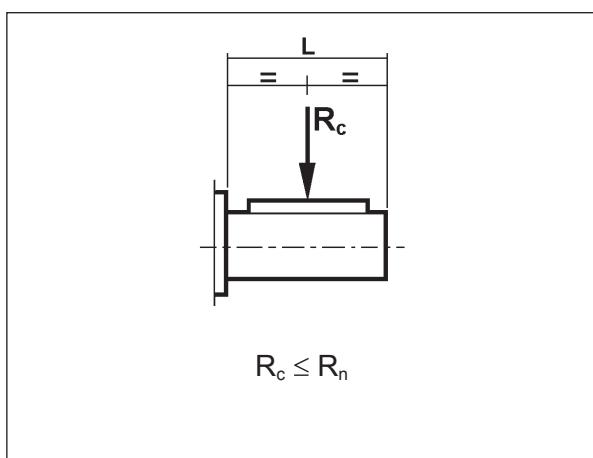

Namely shaft loading ( $R_{c1}$  for input shaft,  $R_{c2}$  for output shaft), must be equal or lower than admissible overhung load capacity for shaft under study ( $R_{n1}$  for input shaft,  $R_{n2}$  for output shaft). OHL capability listed in the rating chart section.

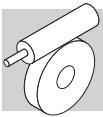

In the formulas given below, index (1) applies to parameters relating to input shaft, whereas index (2) refers to output shaft.

The load generated by an external transmission can be calculated with close approximation by the following equation:

$R_c = \frac{2000 \times M \times K_r}{d}$	
$K_r = 1$	
$K_r = 1.25$	
$K_r = 1.5 - 2.0$	

### 16.2 Overhung loading verification

### 16.3 Load location factor

	Output shaft		$R_{n2} \max [N]$
	a	b	
<b>VF 27</b>	56	44	600
<b>VF 30</b>	60	45	1700
<b>VF 44 - VFR 44 - VF/VF 30/44</b>	71	51	2500

<b>W 63 - WR 63 - VF/W 30/63</b>	132	102	5000
<b>W 75 - WR 75 - VF/W 44/75</b>	139	109	6200
<b>W 86 - WR 86 - VF/W 44/86</b>	149	119	7000
<b>W 110 - WR 110 - VF/W 49/110</b>	173	136	8000
<b>VF 130 - VFR 130 - W/VF 63/130</b>	182	142	13800
<b>VF 150 - VFR 150 - W/VF 86/150</b>	198	155	16000
<b>VF 185 - VFR 185 - W/VF 86/185</b>	220	170	19500
<b>VF 210 - VFR 210 - W/VF 130/210</b>	268	203	34500
<b>VF 250 - VFR 250 - W/VF 130/250</b>	334	252	52000

## 17 THRUST LOADS

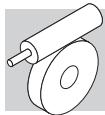

Permissible thrust loads on input [An1] and output [An2] shafts are obtained from the radial loading for the shaft under consideration [Rn1] and [Rn2] through the following equation:

$$\begin{aligned} A_{n1} &= R_{n1} \times 0,2 \\ A_{n2} &= R_{n2} \times 0,2 \end{aligned} \quad (14)$$

The thrust loads calculated through these formulas apply to thrust forces occurring at the same time as rated radial loads.

In the only case that no overhung load acts on the shaft the value of the admissible thrust load [An] amounts to 50% of rated OHL [Rn] on same shaft.

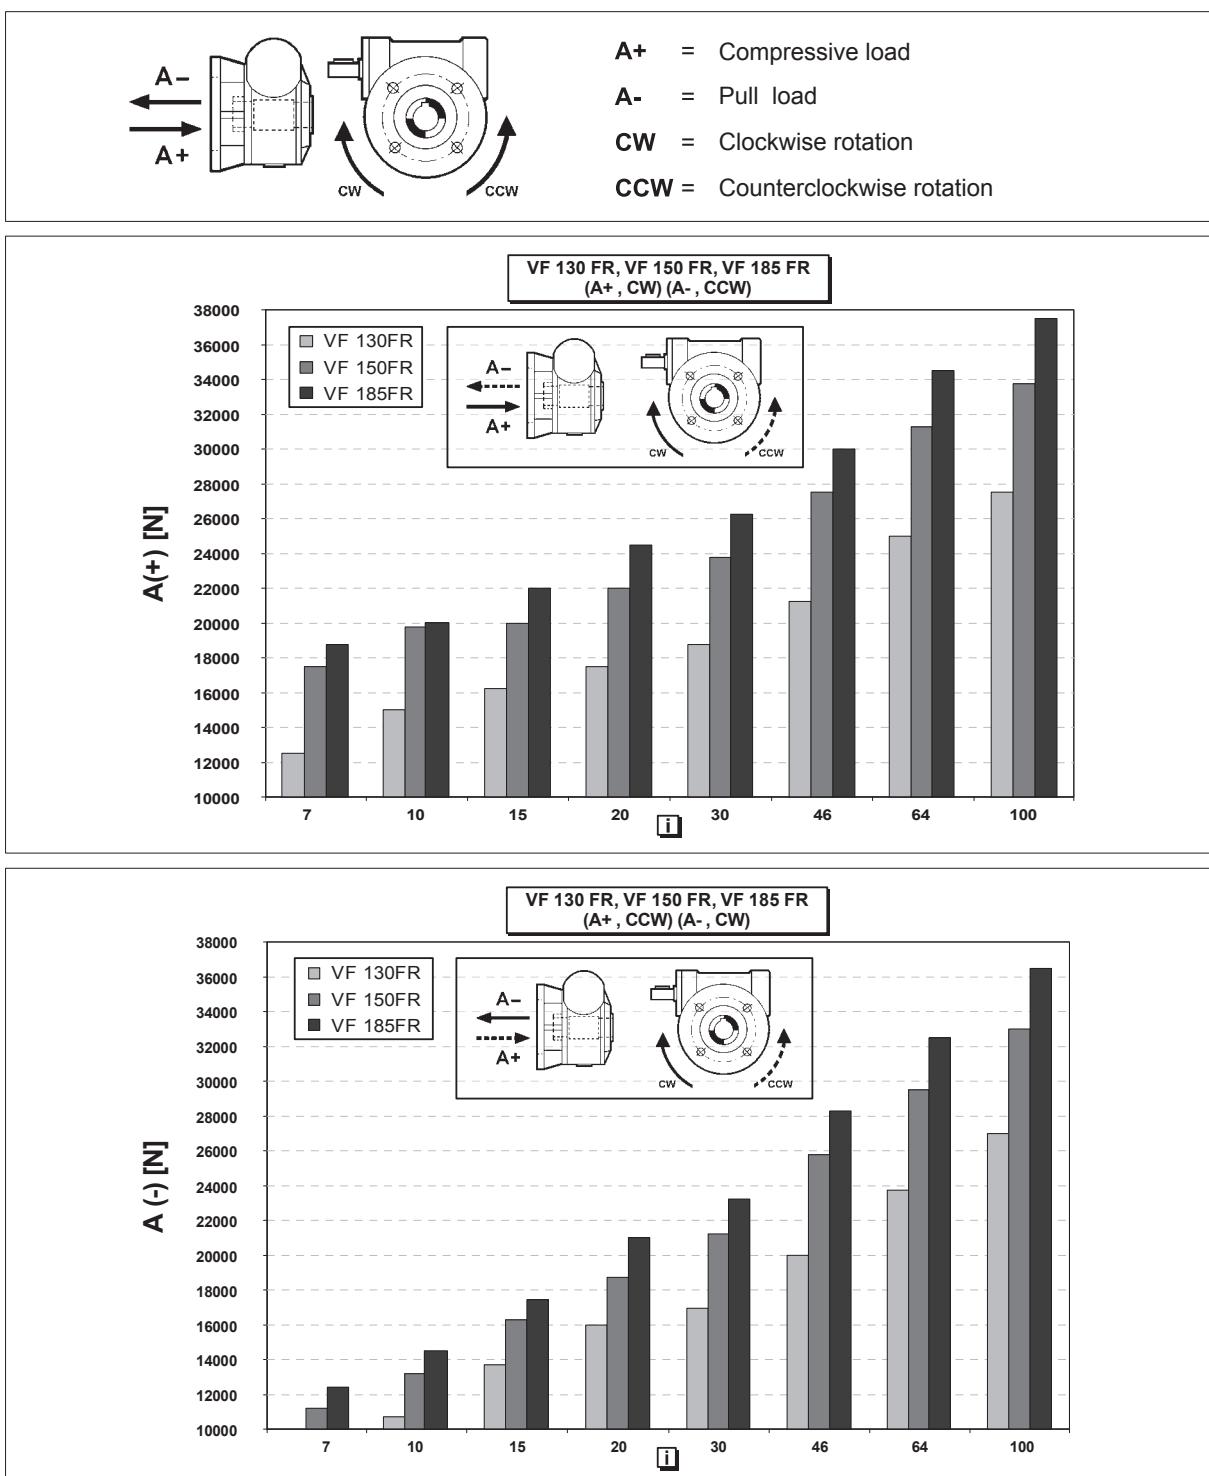

Where thrust loads exceed permissible value or largely prevail over radial loads, contact Bonfiglioli Riduttori for an in-depth analysis of the application.

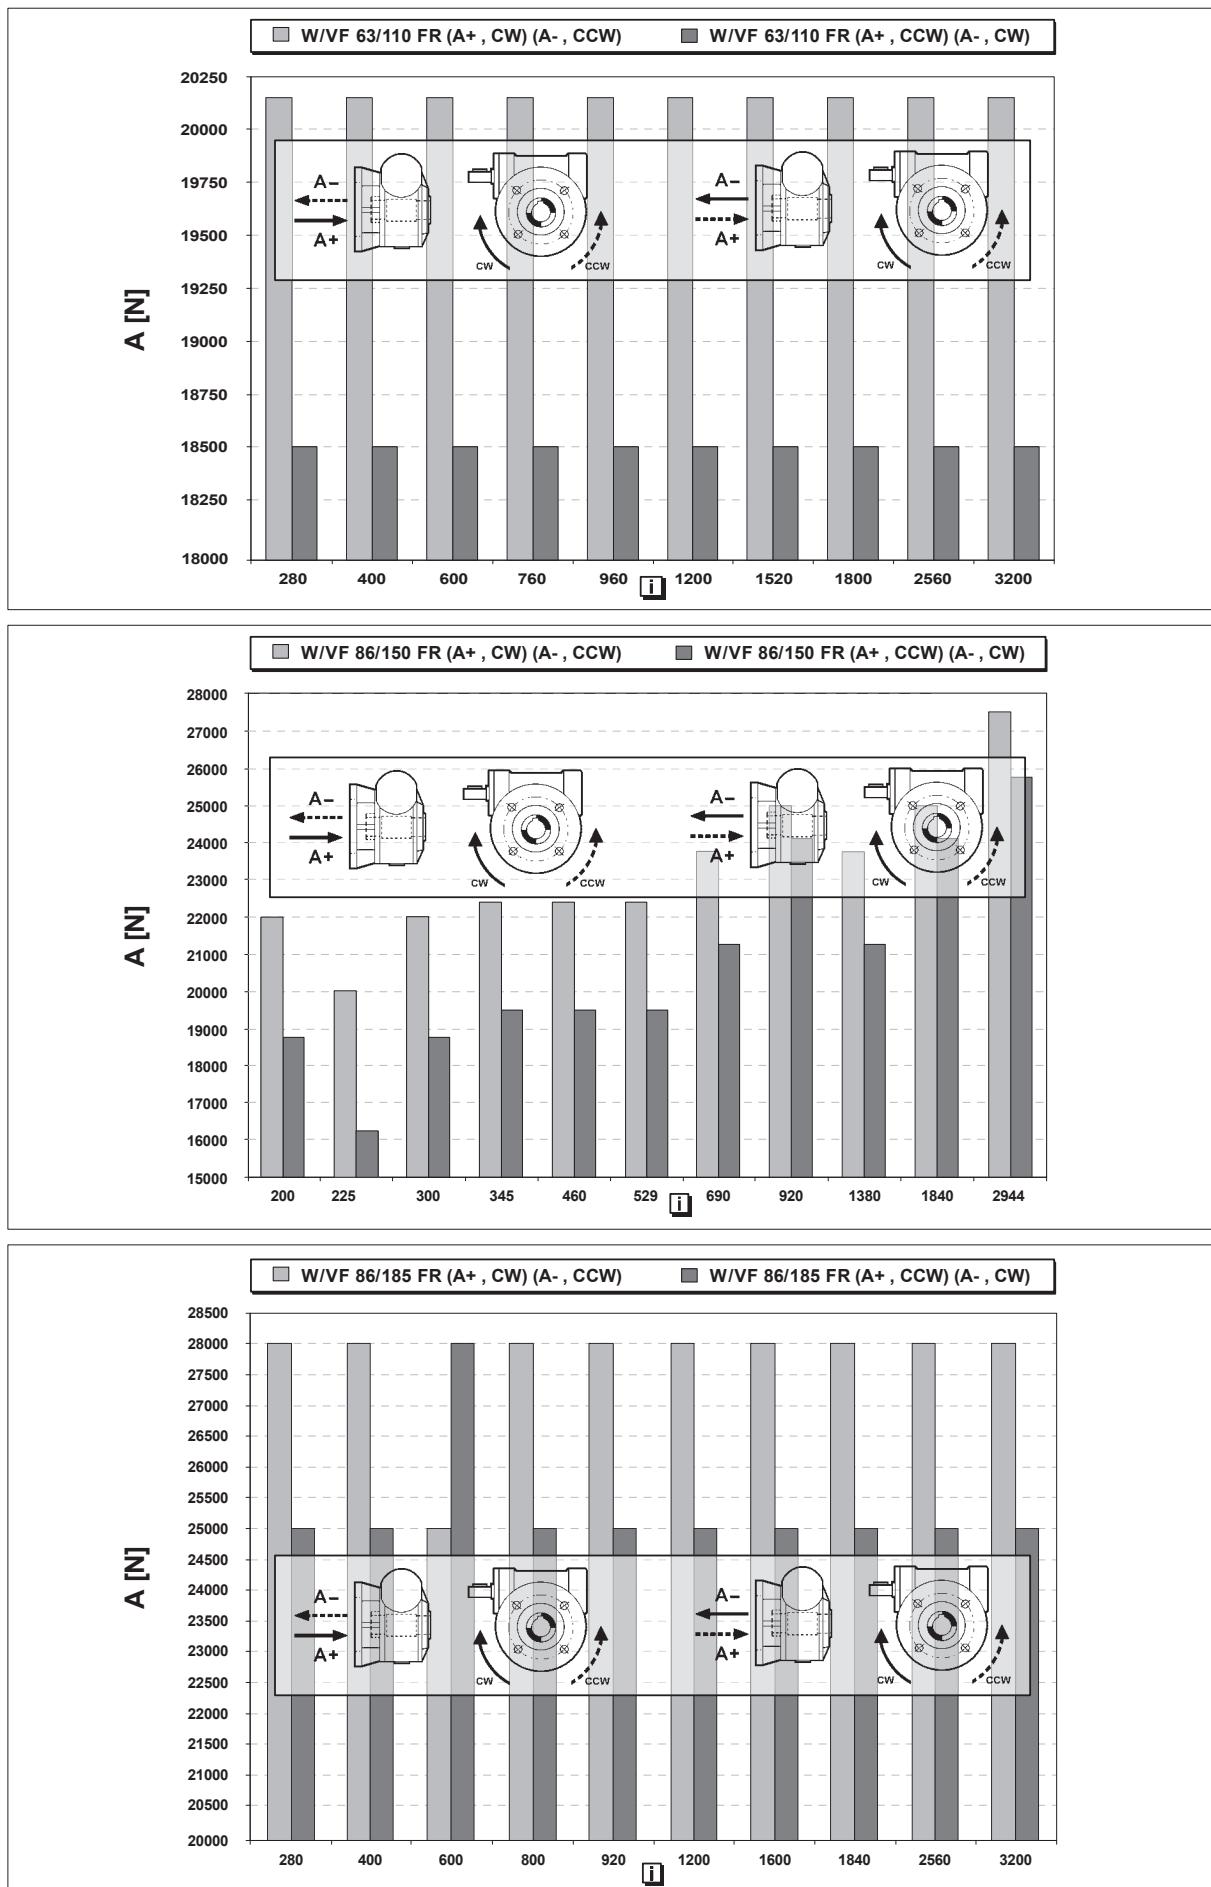

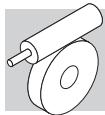

## 17.1 Maximum axial loading for FR version

The FR version is designed to meet the requirements of applications entailing very high axial loads. It is available for units size 130, 150 and 185.

This version, within the same external dimensions as the FC version, is capable of bearing axial loads (well above those of the standard versions) indicated in the table below referred to the output shaft, gear ratio [i] and +/- direction of rotation.

## 18 EFFICIENCY

Efficiency [ $\eta$ ] depends on the following parameters:

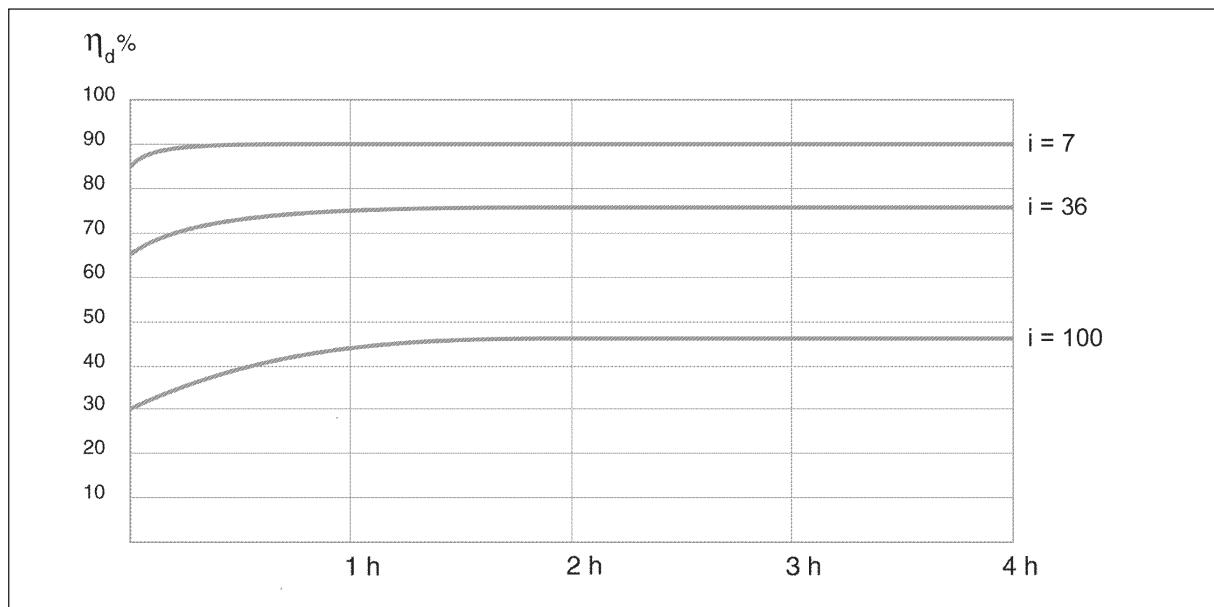

- helix angle of gearing
- driving speed
- running-in of gearing

In this connection, remember that the optimum value is reached after several hours of running-in and is reached later on in steady-state operating gearboxes as shown in the table below.

Therefore, in applications calling for intermittent duty (e.g. hoisting, drives, etc.), motor power must be adequately increased to compensate for the gearbox's low efficiency at start-up.

Torque values  $M_{n2}$  indicated in the catalogue are calculated by considering the steady-state performance of the gearboxes.

The diagram shows indicatively the time required to reach the maximum value of dynamic efficiency.

## 19 NON-REVERSING

Some applications may require occasionally the gearbox to be back-driven by the load through the output shaft, some others instead require the gearbox to lock and hold the load when electric power switches off.

The factor affecting reversibility of worm gears the most is the efficiency with more precisely static efficiency  $\eta_s$  affecting static reversibility and dynamic efficiency  $\eta_d$  affecting dynamic reversibility. Generally only gear ratios  $i=64$  and higher offer locking properties with the greater ratios being totally non reversible.

## 19.1 Static non-reversing

In this condition the gear units cannot be driven back from the output shaft, however slow running-back may still occur if the worm gears are subject to vibrations.

The theoretical condition for the static non-reversing to occur is:

$$\eta_s < 0.4 - 0.5 \quad (15)$$

the  $\eta_s$  value for each worm gear can be found in the respective rating chart.

The opposite situation, i.e. static reversibility applies, theoretically when:

$$\eta_s > 0.5 \quad (16)$$

## 19.2 Dynamic non-reversing

The load-holding capability is dependent on drive speed, dynamic efficiency and, if any, vibrations. The result of non-reversibility is the locking of the output shaft is no longer driven. Partial or total non reversibility should be taken into consideration particularly when high inertia loads are driven, because of the considerable overloads that may apply to the gearbox.

$$\eta_d < 0.5 \quad (17)$$

Where  $\eta_d$  is the value for the dynamic efficiency of the gear unit in the actual operating conditions.

Value can be found in the speed reducer rating chart.

The opposite condition, i.e. dynamic reversing is physically possible when:

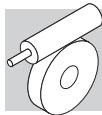

$$\eta_d > 0.5 \quad (18)$$

Table below is a guideline to the various degrees of reversibility for each drive size and gear ratio (data refer to the worm gearing only).

Values for reversibility are indicative as this may be affected by vibrations, operating temperature, lubricating conditions, gear wear, etc.

**As it is virtually impossible to provide and guarantee total non reversing, we recommend the use of an external brake with sufficient capability to prevent vibrations induced starting, where these circumstances are required.**

The ratio combinations that are listed in the chart are those recommended by the manufacturer.

If requested, the Bonfiglioli Technical Service will consider feasibility of combinations that are not listed, as long as these are lower in value than maximum ratio listed in the chart.

## 24 MOTOR AVAILABILITY

### 24.1 Motors to IEC standard

Motor-gearbox combinations resulting from charts are purely based on geometrical compatibility.

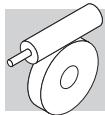

**When selecting a gearmotor, refer to procedure specified at para: "Selection" and observe particularly the condition  $S \geq f_s$ .**

## 24.3 Motors not to IEC standard

For coupling with non-normalized electric motors, the motor coupling end of VF and W speed reducers may be configured with hybrid (i.e., non IEC) input shaft and flange combinations.

Shaft and flange combinations are illustrated below. The table shows the diameters in millimetres for each selection.

The following table lists available configurations, as well as their limited ranges of gear ratios.

		80	90	105	120	140	160	200

	24	⊖	⊖	⊖	7 ≤ i ≤ 100		⊖	⊖

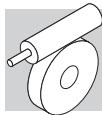

Standard arrangement

Some hybrid shaft/flange combinations are also possible for VF reduction units with center distance greater than 130 mm. Please contact Bonfiglioli Technical Service.

The table above report possible configurations strictly based on geometric criteria.

To determine the compatibility of a motor-gear unit assembly in terms of mechanical factors, double-check the selected configuration against the rating charts for power/speed.

Be sure to avoid those combinations that yield a safety factor  $S < 0.9$ .

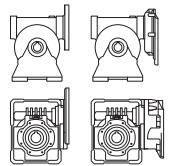

## 25 MOMENT OF INERTIA

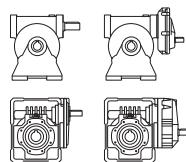

The following charts indicate the mass moment of inertia  $J_r$  [Kgm<sup>2</sup>] referred to gear unit with high speed solid shaft. A key to the symbols used follows:

Values of the moment of inertia refer to compact gearmotors, less the motor inertia. To obtain the overall moment of inertia for the gearmotor just add the value of the inertia for the specific compact motor, given in the relevant rating chart.

Values refer to gearmotors, IEC style, less the motor.

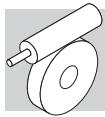

Values refer to speed reducers (solid input shaft).

## 29 CUSTOMER'S SHAFT

Pivot of driven equipment should be made from high grade alloy steel.

Table below shows recommended dimensions for the Customer to consider when designing mating shaft.

A device such as that illustrated below should also be installed to secure the shaft axially. Take care to verify and dimension the various components to suit the needs of the application.

## 30 TORQUE LIMITER

### 30.1 Description

The friction-based torque limiter, available for wormgears type **VF44 - VF49** and **W63...W110**, is designed to protect the transmission from accidental overloads which could damage the drive elements. Against conventional external torque limiters, this versatile solution lends the following advantages:

- unchanged external dimensions against standard same model standard units
- maintenance-free, as the system is permanently lubed
- slip torque can be easily adjusted by means of a simple manual operation from the outside of the gearbox
- slipping, even if continuous, does not create any damage or wear to the mechanical parts, since slipping parts are constantly separated by an oil film.

**We advise against installing this device to lifting equipment.**

### 30.2 Operating principle

The torque limiter basically consists of a double tapered clutch with active surfaces machined on (bronze) worm wheel and hub of output shaft (nodular cast iron GS400/12). Bore of output shaft allows shaft mounting of gear unit onto driven machine.

Active surfaces of the torque limiter are pressed against each other by thrust generated by adequately proportioned spring washers. Transmissible torque is proportional to axial force applied by the springs and adjustment of torque setting is easily conducted manually through an external ring nut.

### 30.3 Protection of the machine from overloads

The torque limiter, properly adjusted in function of the torque necessary for the driven equipment, protects all mechanical components of the transmission avoiding any damage due to overloads.

### 30.4 Reversing of a self-locking unit

In some applications it may be desired to rotate the output shaft while machine is not operating. Such a situation is not always possible with high-ratio self-locking worm gears. Using the torque limiter it is possible to conduct such operation untightening the ring nut.

### 30.5 VF...L, W...L

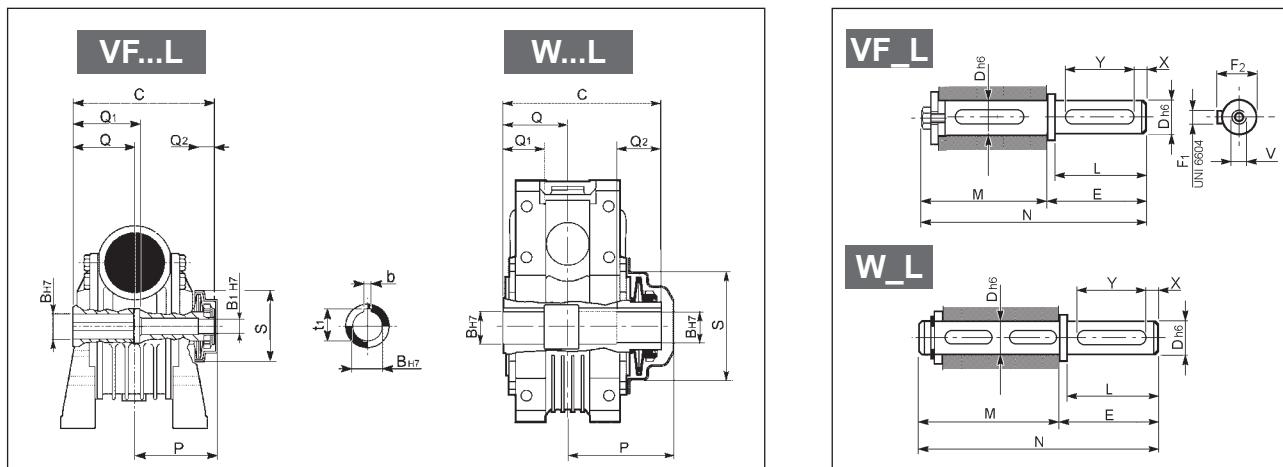

L1								L2

### 30.7 Slip torque setting

A preliminary slip torque setting is conducted at the factory. Reference is made to torque rating  $Mn_2$  [ $n_1=1400$ ] of the captioned VF or W gear unit.

Here below the operations performed at the factory for the initial adjustment are listed.

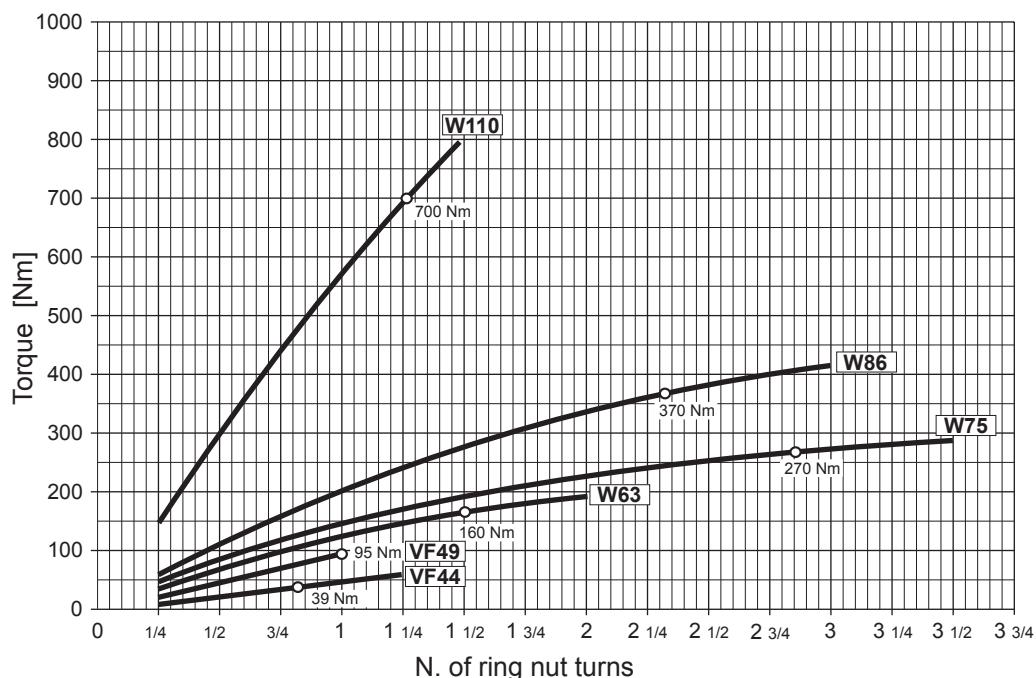

Same steps, with the exception of step (2), must be followed when a different torque setting is required.

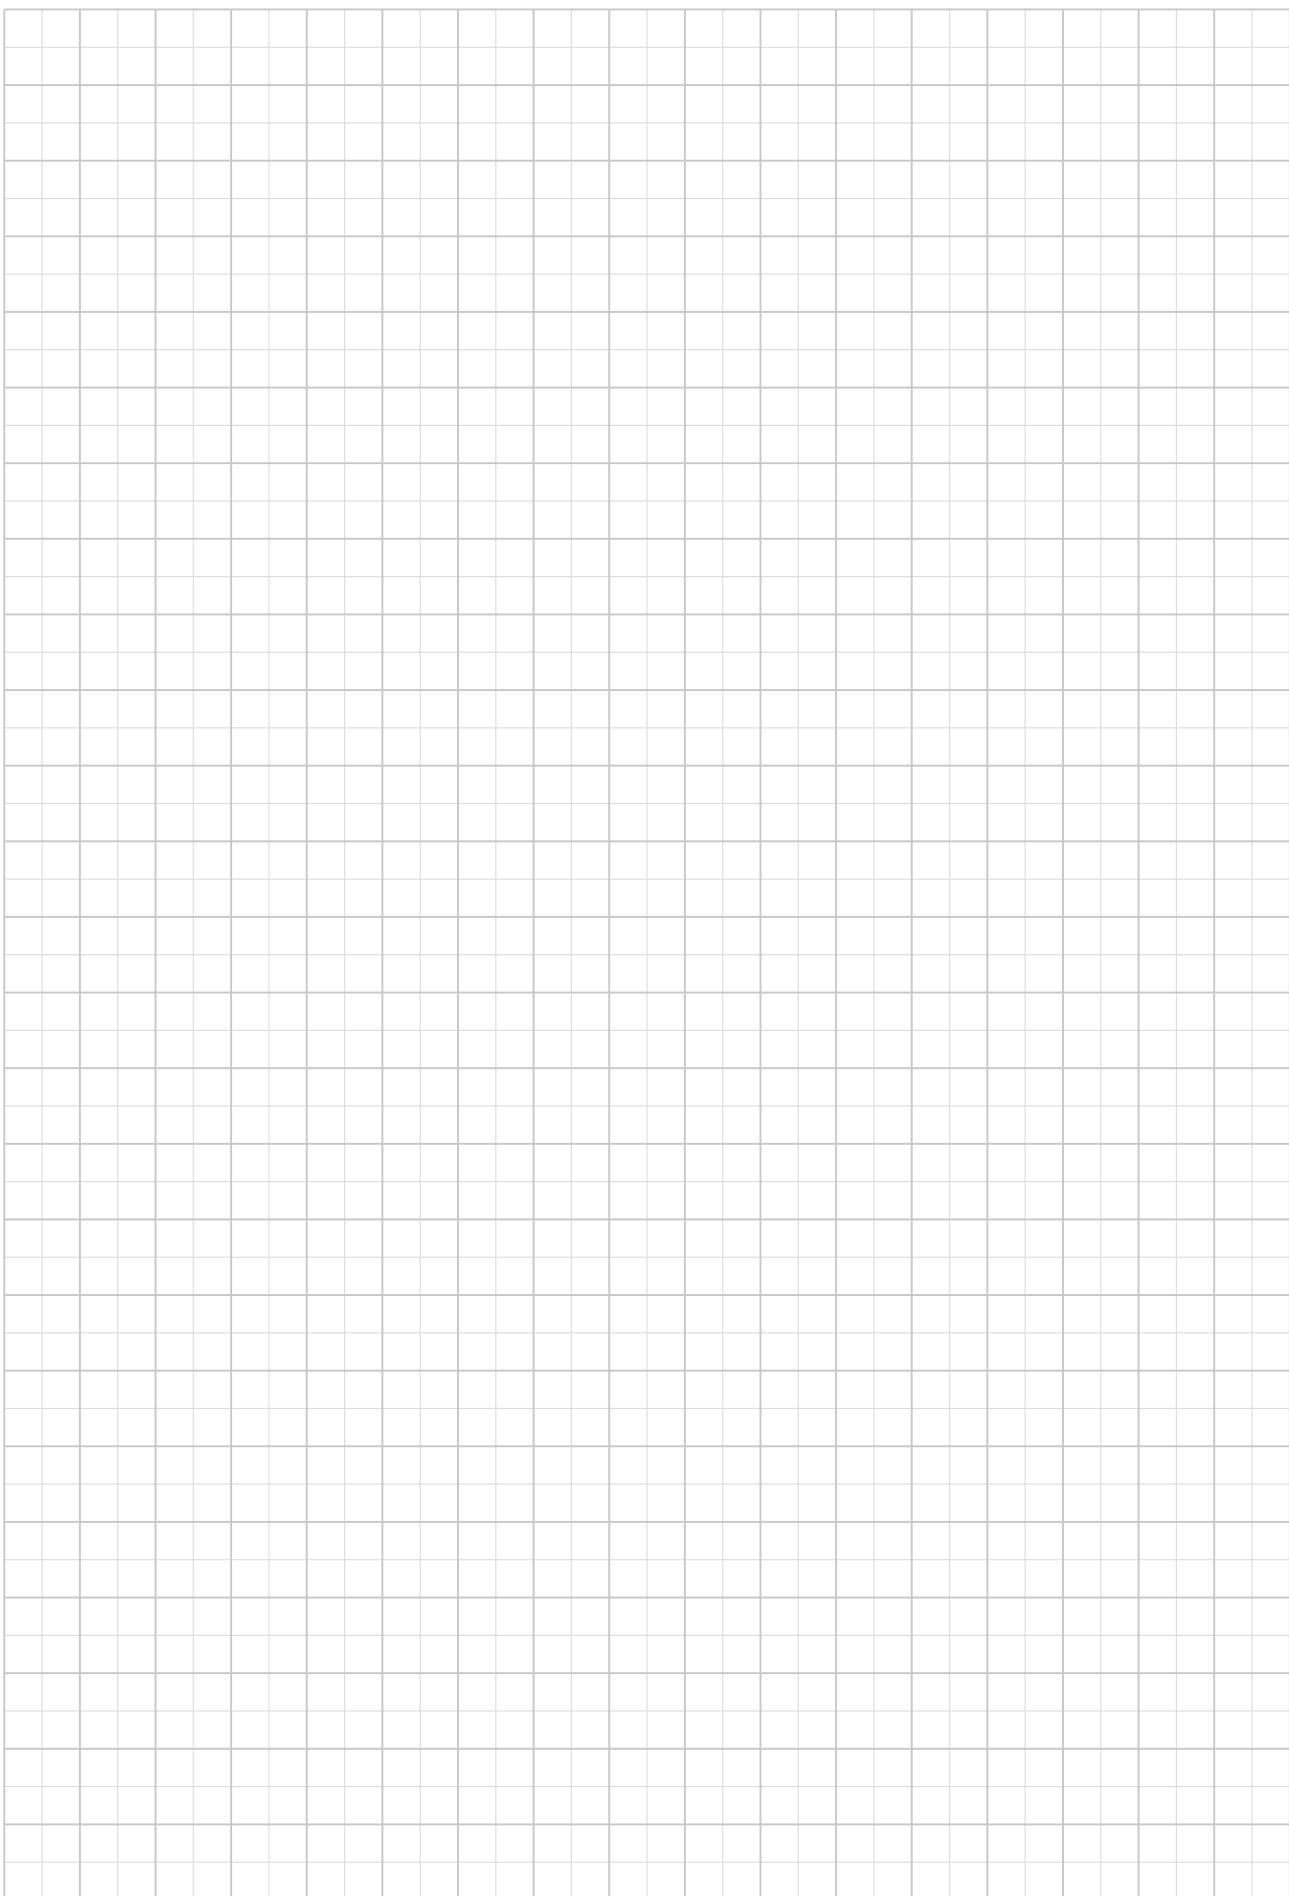

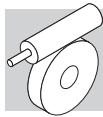

1. Ring nut is tightened until spring washers are sufficiently loaded that manual rotation is hardly possible.

2. By means of an engraver marks are made, in identical (angular) position, on both the ring nut and the hollow shaft.

Setting will then be referred to as the zero-point for the consequent slip torque adjustment, through turning of the ring nut.

3. Ring nut is then turned of the number of turns, or fraction of, corresponding to nominal torque rating  $Mn_2$  of the captioned gear unit. In this case the diagram shown here under refers as to the proportion between number of turns and transmissible torque. Same diagram comes handy for customised torque adjustments, should these be required with time.

## VF-EP / W-EP - GEARBOXES AND GEARMOTORS FOR CORROSIVE AND ASEPTIC ENVIRONMENTS

### 31 MAIN BENEFITS OF THE EP (Enhanced Protection) SERIES FOR THE FOOD AND BEVERAGE INDUSTRIES

All companies involved in the food and beverage industry today have the choice of a newly designed range of products perfectly suiting their hygiene and corrosion-resistant specifications, which are not normally available among standard products.

With the utmost attention being given to oil tightness and wash down of the gearmotor's exterior surfaces, this allows the unit to be installed in the close proximity of the food process, without the need of screening by cabinets or guards.

The epoxy coating, with a total thickness of ca. 200 µm, provides superior abrasion and corrosion resistance properties. The complete unit in fact, whether gearmotor or gearbox only, is first coated with a two-part epoxy primer layer, followed by a highly resistant two part epoxy finish coating, which is lead-and chrome-free. The material is registered by NSF and FDA for the food-processing and pharmaceutical industries, for incidental food contact , and besides resisting the corrosion of most acid and alkaline substances, is also well suited against most chemical detergents commonly used in the industry. As per the Norm ISO 9223, the epoxy coating provided is suitable for the most aggressive environments, top classified C5 in the corrosivity scale.

Three colours are available for the finish, identified through the RAL code numbers RAL 9010 (white), 5010 (blue) e 9006 (light grey).

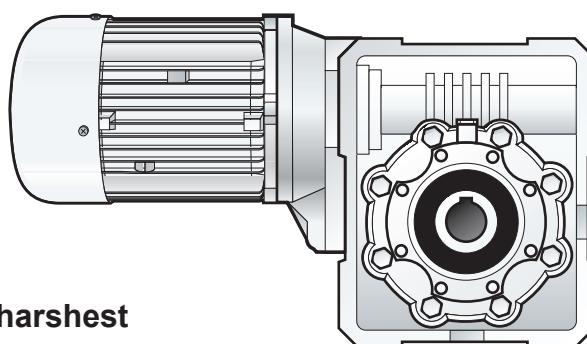

The **\_EP** product can be further tailored to specific requirements through various options and mounting accessories.

Frame sizes available: 44 (excepted VFR style), 49, 63, 75, 86. Motor availability: 0,12 through 4 kW, both compact type and IEC – standard 2, 4 and 6 poles.

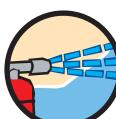

#### Perfectly suited for the food & beverage industries

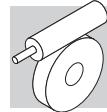

#### Corrosion resistant

#### Resisting the harshest environments

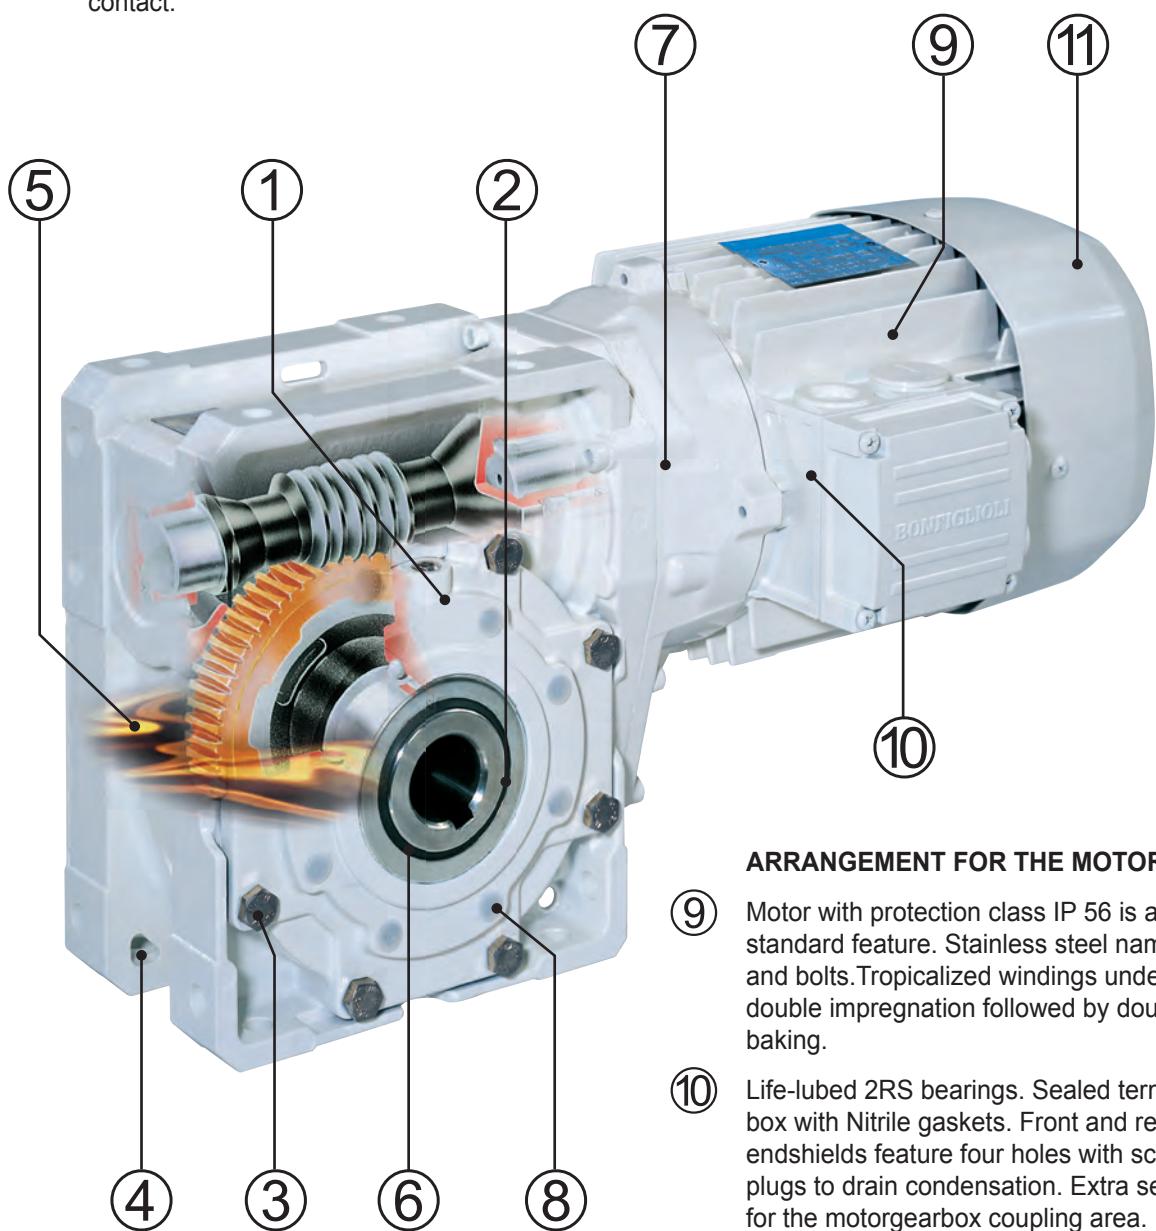

#### Can be cleaned/sanitized with most detergents

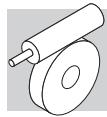

#### ARRANGEMENT FOR THE GEAR UNIT

- ① The speed reducer is fully sealed to minimise contamination of the environment.
- ② Stainless steel output shaft - AISI 316.
- ③ Stainless steel nameplate and bolts.
- ④ Through holes facilitate discharge of water after wash-down.
- ⑤ In option is available lubricant UH1-class synthetic oil registered by NSF for the food-processing and pharmaceutical industries . In compliance with FDA for incidental food contact.
- ⑥ Oil seals loaded with stainless steel inner spring. Availability of washdown duty double lip oil seals with stainless steel frame.
- ⑦ Exterior surfaces are primed and paint finished with a two-part epoxy coating, FDA and NSF approved (depending on color choice) for incidental food contact.
- ⑧ Button plugs for unused mounting holes.

#### ARRANGEMENT FOR THE MOTOR

- ⑨ Motor with protection class IP 56 is a standard feature. Stainless steel nameplate and bolts. Tropicalized windings undergo double impregnation followed by double baking.
- ⑩ Life-lubed 2RS bearings. Sealed terminal box with Nitrile gaskets. Front and rear endshields feature four holes with screw plugs to drain condensation. Extra sealing for the motorgearbox coupling area.
- ⑪ Chemically inert fan.

## 33 GEARBOX OPTIONS

### PX

Wash down duty oil seals for the output shaft. The particular oil seals, offered as an option, make the gearmotor suitable for arduous environments where frequent washdowns occur, often with high-pressure hot water, together with sanitizing agents. The stainless steel screen and the low friction PTFE double lip design provide an extended life and improved sealing function even under extreme conditions with the presence of aggressive media.

### PV

Fluoro elastomer rings on output shaft. Stainless steel loading spring.

### UH1

Food grade synthetic lubricant. The gearbox is factory filled with "long life" lubricant, approved for incidental food contact and registered as UH1 by the NSF for the food and pharma industry, it also satisfy the FDA 21 CFR Sec. 178.3570 norms.

It's polyglycol-based synthetic nature, not only extends the application range from temperatures of -25 °C to +150 °C, but does not require periodical oil change thus, with the absence of contamination, the gearbox is virtually maintenance-free.

## CERTIFICATES

### AC - Certificate of compliance

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

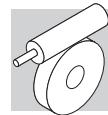

### CC - Inspection certificate

The document entails checking on order compliance, the visual inspection of external conditions and of mating dimensions. Checking on main functional parameters in unloaded conditions is also performed along with oil seal proofing, both in static and in running conditions. Units inspected are sampled within the shipping batch and marked individually.

## 34 MOTOR OPTIONS

**The available options for BN-EP and M-EP motors are: D3, E3, K1, H1, NH1, RC, RV, ACM, CC, CUS, S2, S3, S9.**

**For more detailed information please consult the Electric Motor section in this book.**

### 35 OTHERS INFORMATION ABOUT GEARBOX AND GEARMOTOR

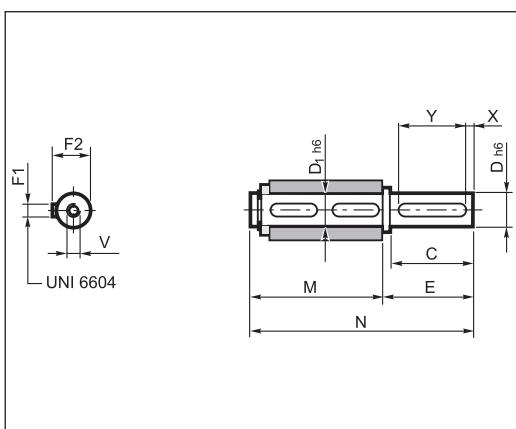

Mounting positions, technical data, motor availability, moments of inertia and dimensions of **VF-EP** e **W-EP** series don't change among equivalent **VF** and **W** product series. In the same way, information about **M-EP** and **BN-EP** motors don't change among equivalent **M** and **BN** product series. All of these information can be obtained in the related chapters of this catalogue.

### 36 THE ACCESSORIES FOR THE \_EP SERIES

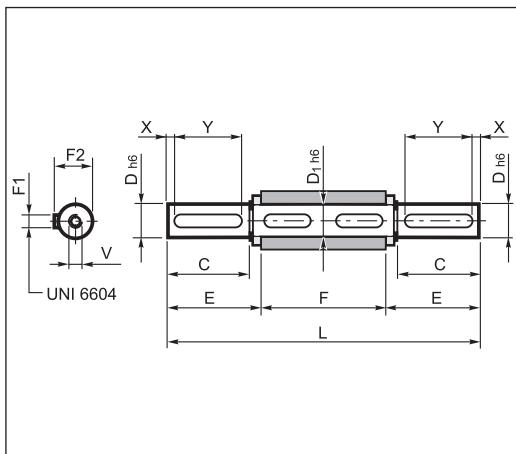

Depending on the mounting pattern, the gearbox can be complemented with the following pieces of equipment:

- AISI 316 stainless steel plug-in solid shaft, both single and double projection
- epoxy paint coated torque arm (specify RAL\_)
- safety cover for the unused hollow shaft area – plastic type for W63, W75 and W86 units, metal type nitrile coated for VF 44 and VF 49, with stainless steel fasteners. IP 56 protection achieved after assembling.

## RVS LIMIT-STOP DEVICE

### 37 GENERAL INFORMATION

The limit-stop device type RVS has been designed to fit Bonfiglioli Riduttori worm gearmotors to operate:

- Green house windows and shades
- Remote-controlled gates
- Hopper frame windows
- Dosing devices for the livestock farming industry
- Butterfly valves

Worm gearmotors equipped with the RVS limit switch device are suitable for linear and rotary intermittent duty applications requiring accurate and repetitive positioning.

For the applications listed above, typically light duty, worm gear-motors should only be selected from relevant selection charts, given at paragraph 40.

The drive selection will then comply with both the application duty and the max. peripheral speed constraints of the limit-switch device.

**The configuration is complete when the limit-switch device RVS is flanged onto the gearmotor through the relevant assembly kit (see next page).**

Configuration kits are available for worm gears type VF 49, W 63, W 75, and W 86 only.

Please note that **RVS** devices will only fit F-flanged VF 49 and FC-flanged W worm gears.

**RVS** mounting side is opposite to flange.

#### 37.1 Technical features

The working principle of the limit-stop device is based on the differential movement of two pairs of wheels – each equipped with a cam – and the relative operation of precision micro-switches that stop and reverse motion through relays (to be fitted by the installer).

Travel end positions, normally the open and closed positions of application frame, are easily set using a common Allen key after gearmotor installation.

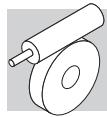

Once adjusted, the unit will retain its settings over time for guaranteed motion repeatability.

In its basic version, the **RVS** limit-stop unit comes with a pair of approx. 1-m long cables. Internal wiring is made at the factory.

The RVS unit is available in the following variants:

**RVS ME:** the limit switch features a 6-stud terminal box for external wiring of cables to main relais.

**RVS DM:** features a double set of micro-switches, connected in series, for absolute reliability where applicable regional standards or regulations call for a redundant design.

**RVS**

**RVS ME DM:** features the combination of the two options described above.

Regardless to the variant the RVS limit switch device offers the following features:

- Extremely quite operation
- Space efficiency
- Ease of installation and setting
- Overall protection IP55
- Adjustment range within a maximum of 43 revolutions of drive shaft.

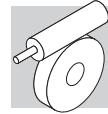

### 38 ORDERING CODES

Determine which device or variant best suits the specific application and locate the part number in the table below:

RVS	RVS ME	RVS DM	RVS ME DM
cod. 193312025	cod. 193312026	cod. 193312027	cod. 193312028

Select also the part number of the specific configuration kit for the speed reducer the limit-stop device is to be installed to:

cod. 192860001	cod. 192860002	cod. 192860003	cod. 192860004
VF 49 F - VFR 49 F	W 63 UFC - WR 63 UFC	W 75 UFC - WR 75 UFC	W 86 UFC - WR 86 UFC

$M_S$	[Nm]	Starting torque

Symbols	Units of Measure	Description
$n$	[min <sup>-1</sup> ]	Rated speed
$P_B$	[W]	Power drawn by the brake at 20°C
$P_n$	[kW]	Motor rated power
$P_r$	[kW]	Required power
$t_1$	[ms]	Brake response time with one-way rectifier
$t_{1s}$	[ms]	Brake response time with electronic-controlled rectifier
$t_2$	[ms]	Brake reaction time with a.c. disconnect
$t_{2c}$	[ms]	Brake reaction time with a.c. and d.c. disconnect
$t_a$	[°C]	Ambient temperature
$t_f$	[min]	Work time at constant load
$t_r$	[min]	Rest time
$W$	[J]	Braking work between service interval
$W_{max}$	[J]	Maximum brake work for each braking
$Z$	[1/h]	Permissible starting frequency, loaded
$Z_0$	[1/h]	Max. permissible unloaded starting frequency ( $I = 50\%$ )

## M2 GENERAL CHARACTERISTICS

### M2.1 Production range

The asynchronous three-phase electric motors of BONFIGLIOLI RIDUTTORI's production, are available in basic designs IMB5 and IMB14 and derived versions, with the following polarities: 2, 4, 6, 2/4, 2/6, 2/8, 2/12.

The technical characteristics of compact motors, M type, are also supplied in this manual.

### M2.2 Standards

The motors described in this catalogue are manufactured to the applicable standards shown in the following table.

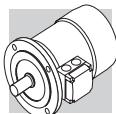

(F 1)

Title	CEI	IEC
General requirements for rotating electrical machines	CEI EN 60034-1	IEC 60034-1
Terminal markings and direction of rotation of rotating machines	CEI 2-8	IEC 60034-8
Methods of cooling for electrical machines	CEI EN 60034-6	IEC 60034-6
Dimensions and output ratings for rotating electrical machines	EN 50347	IEC 60072
Classification of degree of protection provided by enclosures for rotating machines	CEI EN 60034-5	IEC 60034-5
Noise limits	CEI EN 60034-9	IEC 60034-9
Classification of type of construction and mounting arrangements	CEI EN 60034-7	IEC 60034-7
Rated voltage for low voltage mains power	CEI 8-6	IEC 60038
Vibration level of electric machines	CEI EN 60034-14	IEC 60034-14

The motors also comply with foreign standards adapted to IEC 60034-1 as shown here below.

(F 2)

DIN VDE 0530	Germany
BS5000 / BS4999	Great Britain
AS 1359	Australia
NBNC 51 - 101	Belgium
NEK - IEC 34	Norway
NF C 51	France
OEVE M 10	Austria
SEV 3009	Switzerland
NEN 3173	Netherlands
SS 426 01 01	Sweden

## M2.3 Motors for USA and Canada

### CUS

BN motors are available in NEMA Design C configuration (concerning electrical characteristics), in compliance with CSA (Canadian standard) C22.2 No. 100 and UL (Underwriters Laboratory) UL 1004-1. By specifying the option CUS the name plate is marked with both symbols shown here below.

US power mains voltages and the corresponding rated voltages to be specified for the motor are indicated in the following table:

(F 3)

Frequency	Mains voltage	$V_{mot}$
60 Hz	208 V	<b>200 V</b>
	240 V	<b>230 V</b>
	480 V	<b>460 V</b>
	600 V	<b>575 V</b>

CUS option is applicable onto 50 Hz operating motors as well.

Motors with YY/Y connection (e.g. 230/460-60; 220/440-60) feature, as standard, a 9-stud terminal board. For same executions, as well as for 575V-60Hz tions, as well as for 575V-60Hz supply, the nominal rating is coincident with the correspondent 50Hz rating.

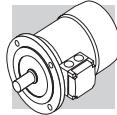

For DC brake motors type BN/M\_FD and BN/M\_AFD, the rectifier is connected to a single-phase 230 VAC supply voltage in the motor terminal box.

**Brake power supply** for brake motors is as follows:

(F 4)

BN_FD ; BN_AFD M_FD ; M_AFD	BN_FA ; BN_BA M_FA	Specify
Wired to terminal box 1~230V a.c.	Separate power supply 230V Δ - 60Hz	230SA
	Separate power supply 460V Y - 60Hz	460SA

The CUS option does not apply to servo-ventilated motors or motors with the AFD brake.

## M2.4 China Compulsory Certification

### CCC

Electric motors destined for sale in the People's Republic of China have to be certified under the CCC (China Compulsory Certification) system. BN motors of up to 7 Nm in rated torque are available with CCC certification and a special nameplate bearing the mark shown below:

The CCC option does not apply to motors with the AFD brake.  
CCC option is not currently available for servo - ventilated motors.

## M2.5 Directives 2006/95/EC (LVD) and 2004/108/EC (EMC)

BN and M motors meet the requirements of Directives 2006/95/EC (Low Voltage Directive) and 2004/108/EC (Electromagnetic Compatibility Directive) and their name plates bear the CE mark. As for the EMC Directive, construction is in accordance with standards CEI EN 60034-1, EN 61000-6-2, EN 61000-6-4.

Motors with FD and AFD brakes, when fitted with the suitable capacitive filter at rectifier input (option **CF**), meet the emission limits required by Standard EN 61000-6-3:2007 "Electromagnetic compatibility - Generic Emission Standard - Part 6-3 Residential, commercial and light industrial environment". Motors also meet the requirements of standard CEI EN 60204-1 "Electrical equipment of machines". The responsibility for final product safety and compliance with applicable directives rests with the manufacturer or the assembler who incorporate the motors as component parts.

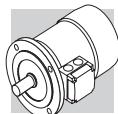

## M2.6 Tolerances

As per the Norms applicable the tolerances here below apply to the following quantities.

(F 5)

-0.15 (1 - $\eta$ ) P ≤ 50kW	Efficiency
-(1 - cosφ)/6 min 0.02 max 0.07	Power factor
±20% *	Slip
+20%	Locked rotor current
-15% +25%	Locked rotor torque
-10%	Max. torque

\* ± 30% for motors with Pn < 1 kW

## M3 MECHANICAL FEATURES

### M3.1 Versions

EC-normalised BN motors are available in the design versions indicated in table (F6) as per Standards CEI EN 60034-14.

Mounting versions are:

**IM B5** (basic)

IM V1, IM V3 (derived)

**IM B14** (basic)

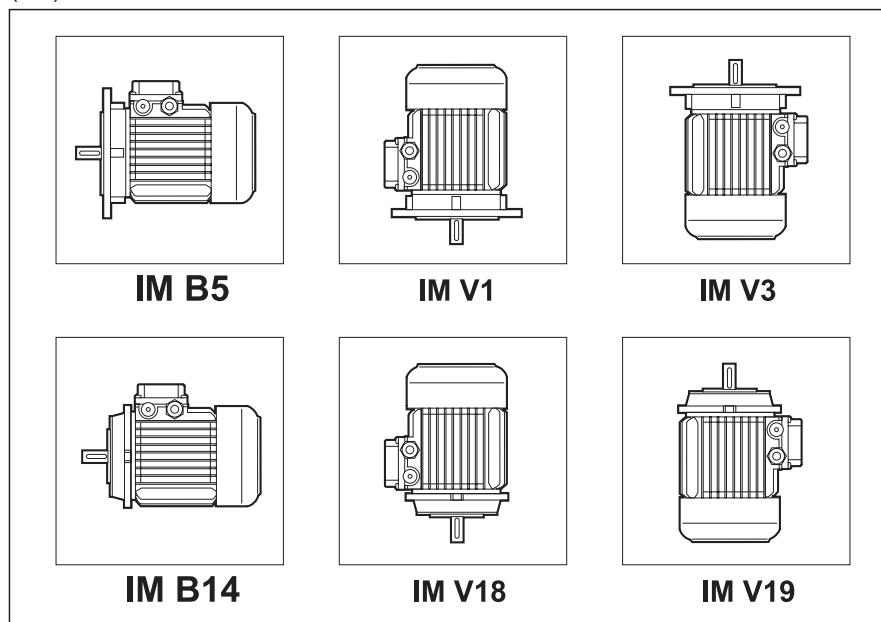

IM V18, IM V19 (derived)

IM B5 design motors can be installed in positions IM V1 and IM V3; IM B14 design motors can be installed in positions IM V18 and IM V19.

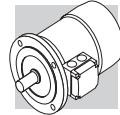

In such cases, the basic design IM B5 or IM B14 is indicated on the motor name plate.

In design versions with a vertically located motor and shaft downwards, it is recommended to request the drip cover (always necessary for brake motors). This facility, included in the option list should be specified when ordering as it does not come as a standard device

(F 6)

Flanged motors can be supplied with a reduced mounting interface, as shown in chart (F7) below.

(F 7)

	BN 71	BN 80	BN 90	BN 100	BN 112	BN 132
	DxE - Ø					
B5R <sup>(1)</sup>	11x23 - 140	14x30 - 160	19x40 - 200	24x50 - 200	24x50 - 200	28x60 - 250
B14R <sup>(2)</sup>	11x23 - 90	14x30 - 105	19x40 - 120	24x50 - 140	—	—

(1) flange with through holes

(2) flange with threaded holes

### M3.2 Degree of protection

#### IP..

The following chart provides an overview of the degrees of protection available.

In addition to the degree of protection specified when ordering, motors to be installed outdoors require protection against direct sunlight and also – when they are to be installed vertically down – a drip cover to prevent the ingress of water and solid particles (option **RC**).

(F 8)

		IP 54	IP 55	IP 56
BN	M		standard	
BN_FD BN_AFD BN_FA	M_FD M_AFD M_FA	standard		

### M3.3 Cooling

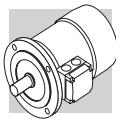

The motors are externally ventilated (IC 411 to CEI EN 60034-6) and are equipped with a plastic fan working in both directions.

The motors must be installed allowing sufficient space between fan cowl and the nearest wall to ensure free air intake and allow access for maintenance purposes on motor and brake, if supplied.

Independent, forced air ventilation (IC 416) can be supplied on request (option U1).

This solution enables to increase

the motor duty factor when driven by an inverter and operating at reduced speed.

### M3.4 Direction of rotation

Rotation is possible in both directions. If terminals U1, V1, and W1 are connected to line phases L1,L2 and L3, clockwise rotation (looking from drive end) is obtained. For counterclockwise rotation, switch two phases.

### M3.5 Noise

Noise levels, measured using the method prescribed by ISO 1680 Standards, are within the maximum levels specified by Standards CEI EN 60034-9.

### M3.6 Vibrations and balancing

Rotor shafts are balanced with half key fitted and fall within the vibration class N, as per Standard CEI EN 60034-14.

If a further reduced noise level is required improved balancing carequired improved balancing can be optionally requested (class B).

Table below shows the value for the vibration velocity for standard (A) and improved (B) balancing.

(F 9)

Vibration class	Angular velocity n [min <sup>-1</sup> ]	Limits of the vibration velocity [mm/s]	
		BN 56 ≤ H ≤ BN 200	M05 ≤ H ≤ M5
A	600 < n < 3600	1.6	
B	600 < n < 3600	0.70	

Values refer to measures with freely suspended motor in unloaded conditions.

### M3.7 Terminal box

Terminal board features 6 studs for eyelet terminal connection.

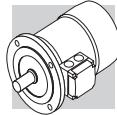

A ground terminal is also supplied for earthing of the equipment.

Terminals number and type are shown in the following table.

For brake power supply, please read par. M6, M7 (brake FD and AFD), M8, M9 (brake FA).

Brakemotors house the a.c./d.c. rectifier (factory pre-wired) inside the terminal box.

Wiring instructions are provided either in the box or in the user manual.

(F 10)

		No. of terminals	Terminal threads	Wire max cross section area mm <sup>2</sup>
<b>BN 56...BN 71</b>	<b>M05, M1</b>	6	M4	2.5
<b>BN 80, BN 90</b>	<b>M2</b>	6	M4	2.5
<b>BN 100...BN 112</b>	<b>M3</b>	6	M5	6
<b>BN 132...BN 160MR</b>	<b>M4</b>	6	M5	6
<b>BN 160M...BN 180M</b>	<b>M5</b>	6	M6	16
<b>BN 180L...BN 200L</b>	—	6	M8	25

### M3.8 Cable entry

The holes used to bring cables to terminal boxes use metric threads in accordance with standard EN 50262 as indicated in the table here after.

(F 11)

		Cable entry	Max. cable diameter allowed [mm]
<b>BN 63</b>	<b>M05</b>	2 x M20 x 1.5	13
<b>BN 71</b>	<b>M1</b>	2 x M25 x 1.5	17
<b>BN 80 - BN 90</b>	<b>M2</b>	2 x M25 x 1.5	17
<b>BN 100</b>	<b>M3</b>	2 x M32 x 1.5	21
		2 x M25 x 1.5	17
<b>BN 112</b>	—	2 x M32 x 1.5	21
		2 x M25 x 1.5	17

## M4 ELECTRICAL CHARACTERISTICS

### M4.1 Voltage

Single speed motors are provided in standard execution either for nominal voltage 230 / 400 V Δ/Y, 50 Hz, or 400 / 690 V Δ/Y, 50 Hz, with a voltage tolerance of ± 10%, according to what is specified on the below table.

On all the motors BN and M, for which the voltage / frequency configuration is not included on the below table, the voltage tolerance is reduced down to ± 5%.

For the operation out of the tolerance boundaries, the temperature may exceed by 10 K the limit provided by the adopted insulation class.

The motors are suitable for operation on distribution European grid with voltage complying with the publication IEC 60038.

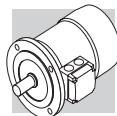

(F 14)

			$V_{met}$ ± 10 % 3 ~	Configuration
IE1	BN 56 ... BN 132	M0 ... M4	230 / 400 V - Δ/Y - 50 Hz	Standard
			400 / 690 V - Δ/Y - 50 Hz	On request at no extra charge
			460 V Y - 60 Hz	Standard
	BN 160 ... 200	M5	400 / 690 V - Δ/Y - 50 Hz	Standard
			460 V Δ - 60 Hz	Standard

<sup>1</sup> 4 pole motor only

The only rated voltage for motors type 50Hz and all double speed motors is 400V.

Applicable tolerances as per CEI EN 60034-1.

The table below shows the wiring options available.

(F 15)

Pole		Wiring options
2	<b>BN 63 ... BN 200</b>	$\Delta / Y$ <sup>(2)</sup>
4	<b>BN 56 ... BN 200</b>	
6	<b>BN 63 ... BN 200</b>	
8	<b>BN 71 ... BN 132</b>	
2/4	<b>BN 63 ... BN 132</b>	$\Delta / YY$ (Dahlander)
2/6	<b>BN 71 ... BN 132</b>	$Y / Y$ (Two windings)
2/8	<b>BN 71 ... BN 132</b>	
2/12	<b>BN 80 ... BN 132</b>	
4/6	<b>BN 71 ... BN 132</b>	
4/8	<b>BN 80 ... BN 132</b>	$\Delta / YY$ (Dahlander)

<sup>(2)</sup> Motors with voltage in ratio 2 (ex. 230/460 - 60) will be equipped with a 9 pin terminal box with winding connection either  $\Delta\Delta/\Delta$  or  $YY/Y$  (except 6 pole BN 63  $\Delta/Y$ )

## M4.2 Frequency

Rated output power BN / M for 60 Hz operation is shown in the following diagram.

(F 16)

		2P	4P	6P
		$P_n$ [kW]		
<b>BN 56A</b>	<b>-</b>	–	0.06	–

<b>BN 180L</b>	–	–	25.3	17.5
<b>BN 200L</b>	–	34	34	22

Double speed BN / M motors supplied at 60 Hz will have an increase of nominal power, referred to 50 Hz, equal to 15%.

If a nominal power rating, equal to the normalised nominal power rating at 50 Hz, was requested to be on a nameplate of a motor meant to be voltage supplied at 60 Hz, the PN option shall be specified on the motor designation.

Motors normally designed for a 50 Hz frequency may be used on a 60 Hz operating grid, but the related data shall be updated according to the following table.

(F 17)

50 Hz		60 Hz		
V - 50 Hz	V - 60 Hz	Pn - 60 Hz	M <sub>n</sub> , M <sub>a</sub> /M <sub>n</sub> - 60 Hz	n [min <sup>-1</sup> ] - 60 Hz
230/400 Δ/Y	220 - 240 Δ	1	0.83	1.2
	380 - 415 Y			
400/690 Δ/Y	380 - 415 Δ	1.15	1	1.2
	265 - 280 Δ			
230/400 Δ/Y	440 - 480 Y			
	440 - 480 Δ			
400/690 Δ/Y				

#### M4.3 Ambient temperature

Catalogue rating values are calculated for 50 Hz operation and for standard ambient conditions (temperature 40 °C; elevation <1000 m a.s.l.) as per the CEI EN 60034-1 Standards.

The motors can be used within the 40 - 60 °C temperature range with rated power output adjusted by factors given in the following charts.

(F 18)

Ambient temperature (°C)	40°	45°	50°	55°	60°
Permitted power as a % of rated power	100%	95%	90%	85%	80%

Should a derating factor higher than 15% apply please consult factory.

#### M4.4 Insulation class

##### CL F

Bonfiglioli motors use class **F** insulating materials (enamelled wire, insulators, impregnation resins) as compare to the standard motor.

##### CL H

Motors manufactured in insulation class **H** are available at request.

In standard motors, stator windings over temperature normally stays below the 80 K limit corresponding to class B over temperature.

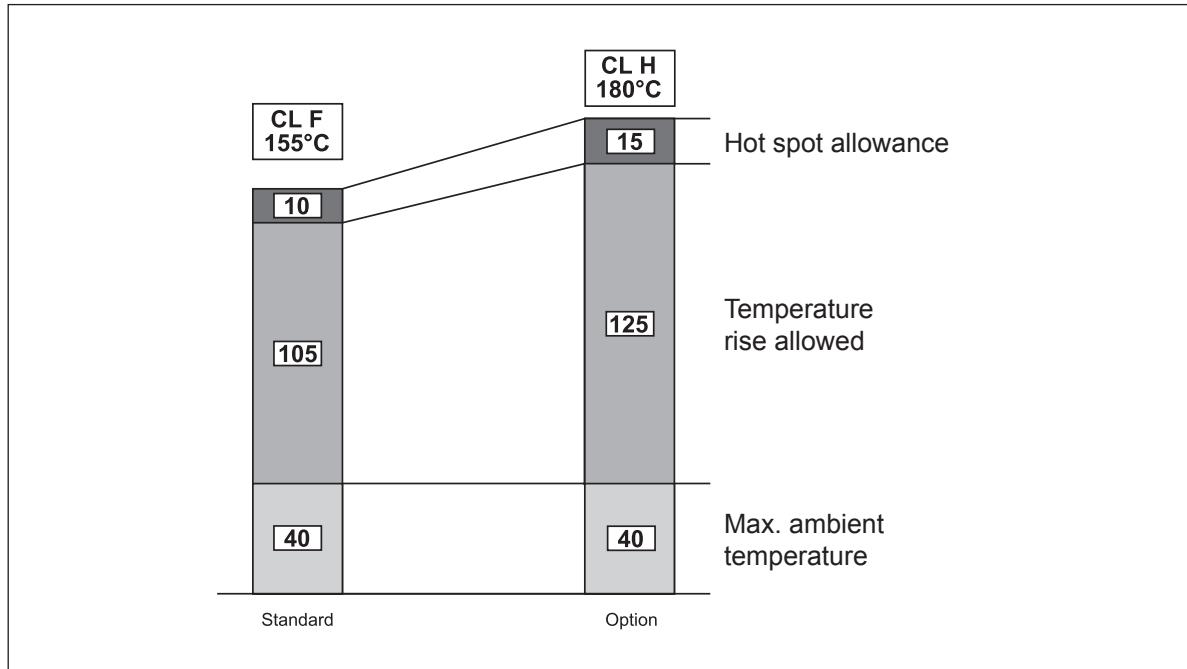

A careful selection of insulating components makes the motors compatible with tropical climates and normal vibration.

For applications involving the presence of aggressive chemicals or high humidity, contact Bonfiglioli Engineering for assistance with product selection.

Not available for motors in compliance with CSA e UL standards (CUS option).

(F 19)

#### M4.5 Type of duty

Unless otherwise specified, catalogue motor power refers to continuous duty S1.

Any operating conditions other than S1 duty must be identified in accordance with duty cycle definitions laid down in standards CEI EN 60034-1.

For duty cycles S2 and S3, the power increase co-efficient reported in the following table may be used. Please note that the table provided below applies to single-speed motors.

As an alternative to S1 continuous duty, one of the following values can be specified at the product configuration stage: S2, S3 or S9. The motor nameplate will be marked with an increased power rating to suit the type of duty, and with specific electrical data and a duty type of S2-30 min, S3-70% or S9 respectively.

For further details, contact Bonfiglioli's Technical Service.

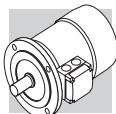

Please contact Bonfiglioli Engineering for the power increase coefficients applicable to switch-pole motors.

(F 20)

	Duty					
	S2			S3 *		
	Cycle duration (min)			Cyclic duration factor (1)		
10	30 (*)	60	25%	40%	70% (*)	Consult factory
f <sub>m</sub>	1.35	1.15	1.05	1.25	1.15	1.1

\* Cycle duration must, in any event, be equal to or less than 10 minutes; if this time is exceeded, please contact our Technical Service.

(\*) Default values from options.

#### M4.5.1 Cyclic duration factor:

$$I = \frac{t_f}{t_f + t_r} \cdot 100 \quad (23)$$

$t_f$  = work time under constant load

$t_r$  = rest time

#### M4.5.2 Limited duration duty S2

This type of duty is characterized by operation at constant load for a limited time, which is shorter than the time required to reach thermal equilibrium, followed by a rest period of sufficient duration to restore ambient temperature in the motor.

#### M4.5.3 Periodical intermittent duty S3:

This type of duty is characterized by a sequence of identical operation cycles, each including a constant load operation period and a rest period.

For this type of duty, the starting current does not significantly influence overtemperature.

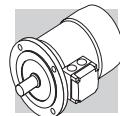

### M4.6 Inverter-controlled motors

The electric motors of series BN and M may be used in combination with PWM inverters with rated voltage at transformer input up to 500 V. Standard motors use a phase insulating system with separators, class 2 enamelled wire and class H impregnation resins (1600V peak-to-peak voltage pulse capacity and rise edge  $t_s > 0.1\mu s$  at motor terminals). Table (F30) shows the typical torque/speed curves referred to S1 duty for motors with base frequency  $f_b = 50$  Hz.

Because ventilation is somewhat impaired in operation at lower frequencies (about 30 Hz), standard motors with incorporated fan (IC411) require adequate torque derating or - alternately - the addition of a separate supply fan cooling.

Above base frequency, upon reaching the maximum output voltage of the inverter, the motor enters a steady-power field of operation, and shaft torque drops with ratio  $(f/f_b)$ .

As motor maximum torque decreases with  $(f/f_b)^2$ , the allowed overloading must be reduced progressively.

(F 21)

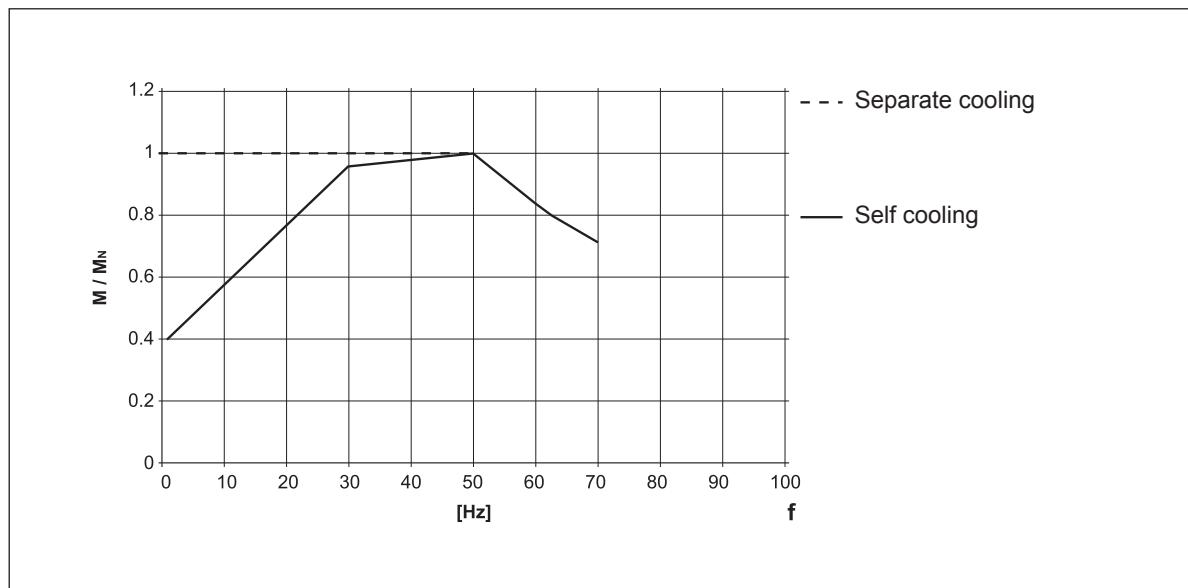

Table (F22) reports the mechanical limit speed for motor operation above rated frequency:

(F 22)

			n [min <sup>-1</sup> ]		
			2p	4p	6p
≤ BN 112	M05...M3		5200	4000	3000
BN 132...BN 200L	M4, M5		4500	4000	3000

Above rated speed, motors generate increased mechanical vibration and fan noise. Class B rotor balancing is highly recommended in these applications. Installing a separate supply fan cooling may also be advisable.

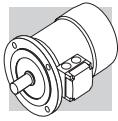

Remote-controlled fan and brake (if fitted) must always be connected direct to mains power supply.

#### M4.7 Permissible starts per hour, Z

The rating charts of brakemotors lend the permitted number of starts  $Z_0$ , based on 50% intermittence and for unloaded operation.

The catalogue value represents the maximum number of starts per hour for the motor without exceeding the rated temperature for the insulation class F.

To give a practical example for an application characterized by inertia  $J_c$ , drawing power  $P_r$  and requiring mean torque at start-up  $M_L$  the actual number of starts per hour for the motor can be calculated approximately through the following equation:

$$Z = \frac{Z_0 \cdot K_c \cdot K_d}{K_J} \quad (24)$$

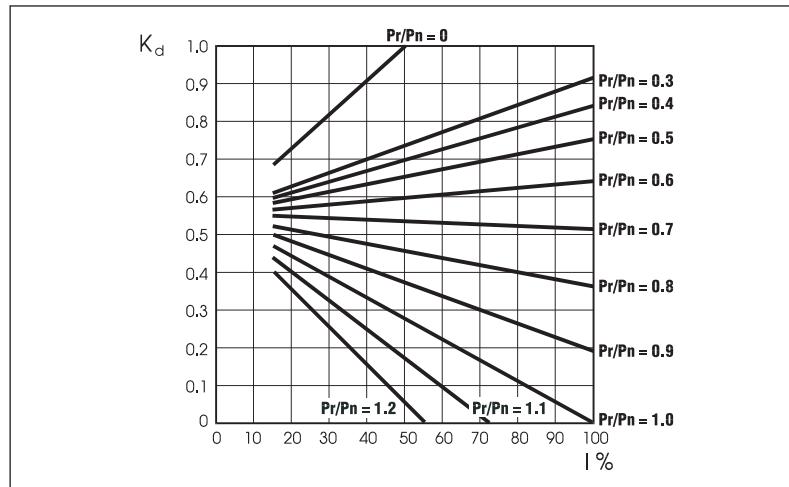

where:

$$K_J = \frac{J_m + J_c}{J_m} \quad \text{inertia factor}$$

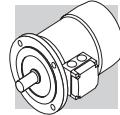

$$K_c = \frac{M_a - M_L}{M_a} \quad \text{torque factor}$$

$$K_d = \quad \text{load factor see table (F23)}$$

(F 23)

If actual starts per hour is within permitted value ( $Z$ ) it may be worth checking that braking work is compatible with brake (thermal) capacity  $W_{max}$  also given in table (F30), (F40) and (F48) and dependent on the number of switches (c/h).

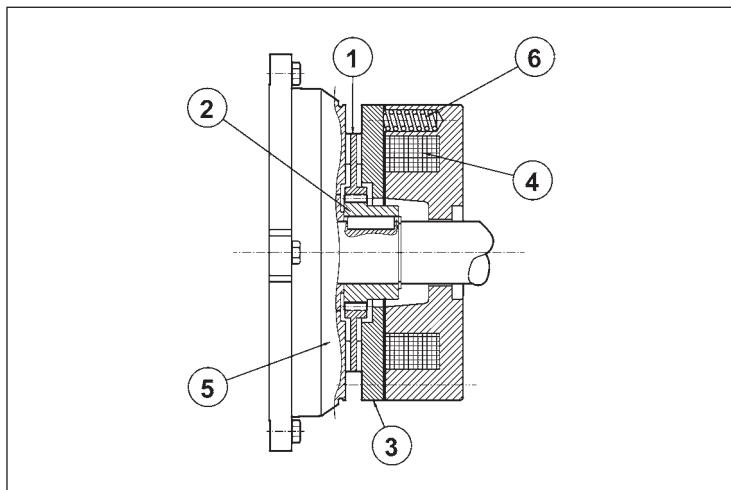

## M5 ASYNCHRONOUS BRAKE MOTORS

### M5.1 Operation

Versions with incorporated brake use spring-applied DC (FD, AFD option) or AC (FA options) brakes. All brakes are designed to provide fail-safe operation, meaning that they are applied by spring-action in the event of power failure.

(F 24)

#### Key:

- ① brake disc
- ② disc carrier
- ③ pressure plate
- ④ brake coil
- ⑤ motor rear shield
- ⑥ brake springs

When voltage is interrupted, pressure springs push the armature plate against the brake disc. The disc becomes trapped between the armature plate and motor shield and stops the shaft from rotation.

When the coil is energized, a magnetic field strong enough to overcome spring action attracts the armature plate, so that the brake disc – which is integral with the motor shaft – is released.

### M5.2 Most significant features

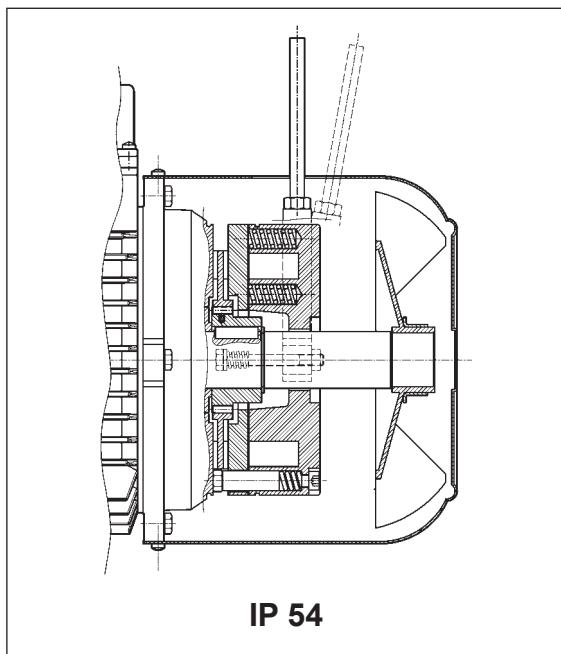

- High braking torques (normally  $M_b \approx 2 M_n$ ), braking torque adjustment.
- Steel brake disc with double friction lining (low-wear, asbestos-free lining).
- Hexagonal seat on motor shaft fan end (N.D.E.) for manual rotation (not compatible with options PS, RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6).
- Manual release lever (options **R** and **RM** for BN/M\_FD; option **R** for BN/M\_FA).
- Manual mechanical release (option **R** for BN/M\_AFD).
- Corrosion-proof treatment on all brake surfaces.
- Insulation class F.

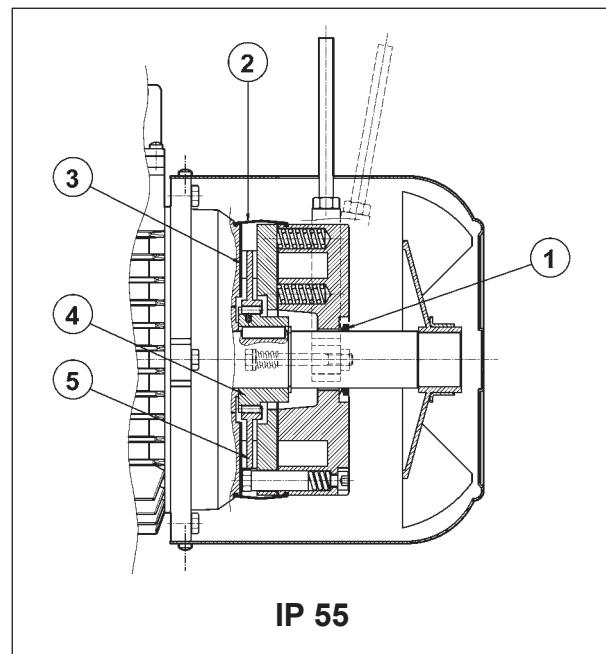

## M6 DC BRAKE MOTORS TYPE BN\_FD and M\_FD

**Frame sizes:** BN 63 ... BN 200L / M05 ... M5

(F 25)

(F 26)

**Direct current** toroidal-coil electromagnetic brake bolted onto motor shield. Preloading springs provide axial positioning of magnet body.

Brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device.

Brake torque factory setting is indicated in the corresponding motor rating charts. Braking torque may be modified by changing the type and/or number of springs.

At request, motors may be equipped with manual release lever with automatic return (**R**) or system for holding brake in the released position (**RM**).

See variant at paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

FD brakes ensure excellent dynamic performance with low noise. DC brake operating characteristics may be optimized to meet application requirements by choosing from the various rectifier/power supply and wiring connection options available.

**For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service.**

### M6.1 Degree of protection

Standard protection class is IP54.

Brake motor FD is also available in protection class **IP55**, which mandates the following variants:

- ① V-ring at N.D.E. of motor shaft
- ② dust and water-proof rubber boot
- ③ stainless steel ring placed between motor shield and brake disc
- ④ stainless steel hub
- ⑤ stainless steel brake disc

## M6.2 FD brake power supply

A rectifier accommodated inside the terminal box feeds the DC brake coil. Wiring connection across rectifier and brake coil is performed at the factory.

On all single-pole motors, rectifier is connected to the motor terminal board.

Rectifier standard power supply voltage  $V_B$  is as indicated in the following table, regardless of mains frequency:

(F 27)

2, 4, 6 P					1 speed
		BN_FD / M_FD			
		$V_{mot}$ ± 10% 3 ~	$V_B$ ± 10% 1 ~	brake connected to terminal board power supply	separate power supply
<b>BN 63...BN 132</b>	<b>M05...M4LB</b>	230/400 V – 50 Hz	230 V	standard	specify $V_B$ SA o $V_B$ SD
<b>BN 160...BN 200</b>	<b>M4LC...M5</b>	400/690 V – 50 Hz	400 V	standard	specify $V_B$ SA o $V_B$ SD

Switch-pole motors feature a separate power supply line for the brake with rectifier input voltage  $V_B$  as indicated in the table below:

(F 28)

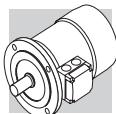

2/4, 2/6, 2/8, 2/12, 4/6, 4/8 P					2 speed
		BN_FD / M_FD			
		$V_{mot}$ ± 10% 3 ~	$V_B$ ± 10% 1 ~	brake connected to terminal board power supply	separate power supply
<b>BN 63...BN 132</b>	<b>M05...M4LB</b>	400 V – 50 Hz	230 V	—	specify $V_B$ SA o $V_B$ SD

The diode half-wave rectifier ( $VDC \approx 0,45 \times VAC$ ) is available in versions **NB**, **SB**, **NBR** e **SBR**, as detailed in the table below:

(F 29)

			standard	at request
<b>BN 63</b>	<b>M05</b>	<b>FD 02</b>

<b>BN 160L - BN 180M</b>	<b>M5</b>	<b>FD 06</b>		
<b>BN 180L - NM 200L</b>	—	<b>FD 07</b>		

(\*)  $t_{2c} < t_{2r} < t_2$

Rectifier **SB** with electronic energizing control over-energizes the electromagnet upon power-up to cut brake release response time and then switches to normal half-wave operation once the brake has been released.

Use of the **SB** rectifier is mandatory in the event of:

- high number of operations per hour
- reduced brake release response time
- brake is exposed to extreme thermal stress

Rectifiers **NBR** or **SBR** are available for applications requiring quick brake intervention (braking condition reinstatement) response.

These rectifiers complement the **NB** and **SB** types as their electronic circuit incorporates a static switch that de-energizes the brake quickly in the event voltage is missing.

This arrangement ensures short brake release response time with no need for additional external wiring and contacts.

Optimum performance of rectifiers **NBR** and **SBR** is achieved with separate brake power supply.

**Versions available:** 230Vac ±10%, 400Vac ± 10%, 50/60 Hz (with power supply); 100Vdc ±10%, 180Vdc ± 10% (with SD option).

### M6.3 FD brake technical specifications

The table below reports the technical specifications of DC brakes FD.

(F 30)

Brake	Brake torque M <sub>b</sub> [Nm] springs			Release		Braking		W <sub>max</sub> per brake operation [ J ]			W [MJ]	P [W]
	6	4	2	t <sub>1</sub> [ms]	t <sub>1s</sub> [ms]	t <sub>2</sub> [ms]	t <sub>2c</sub> [ms]	10 s/h	100 s/h	1000 s/h		
FD02	—	3.5	1.75	30	15	80	9	4500	1400	180	15	17

FD07	150	100	50	—	120	200	25	40000	9300	1000	130	65
FD08*	250	200	170	—	140	350	30	60000	14000	1500	230	100
FD09**	400	300	200	—	200	450	40	70000	15000	1700	230	120

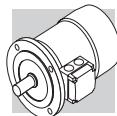

\* brake torque values obtained with 9, 7 and 6 springs, respectively

t<sub>1</sub> = brake release time with half-wave rectifier  
t<sub>1s</sub> = brake release time with over-energizing rectifier  
t<sub>2</sub> = brake engagement time with AC line interruption and separate power supply

\*\* brake torque values obtained with 12, 9 and 6 springs, respectively

t<sub>2c</sub> = brake engagement time with AC and DC line interruption – Values for t<sub>1</sub>, t<sub>1s</sub>, t<sub>2</sub>, t<sub>2c</sub> indicated in the tab. (F30) are referred to brake set at maximum torque, medium air gap and rated voltage

W<sub>max</sub> = max energy per brake operation  
W = braking energy between two successive air gap adjustments  
P<sub>b</sub> = brake power absorption at 20 °C  
M<sub>b</sub> = static braking torque (±15%)  
s/h = starts per hour

The brake pad wear depends on the operating/ambient conditions (temperature, humidity, angular speed, specifica pressure); Therefore the declared wear rate must be considered as indicative.

#### M6.4 FD brake connections

On standard single-pole motors, the rectifier is connected to the motor terminal board at the factory. For switch-pole motors and where a separate brake power supply is required, connection to rectifier must comply with brake voltage VB stated in motor name plate.

**Because the load is of the inductive type, brake control and DC line interruption must use contacts from the usage class AC-3 to IEC 60947-4-1.**

Table (F31) – Brake power supply from motor terminals and AC line interruption

Delayed stop time  $t_2$  and function of motor time constants.

Mandatory when soft-start/stops are required.

Table (F32) – Brake coil with separate power supply and AC line interruption

Normal stop time independent of motor.

Achieved stop times  $t_2$  are indicated in the table (F30).

Table (F33) – Brake coil power supply from motor terminals and AC/DC line interruption.

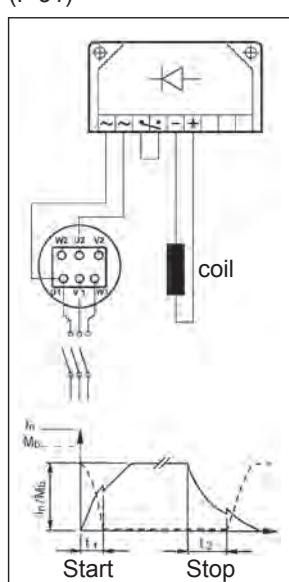

Quick stop with operation times  $t_{2c}$  as per table (F30).

Table (F34) – Brake coil with separate power supply and AC/DC line interruption.

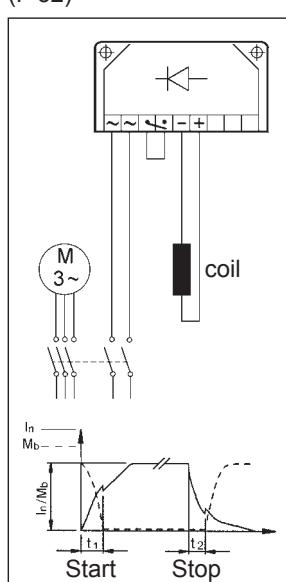

Stop time decreases by values  $t_{2c}$  indicated in the table (F30).

The brake may be voltage supplied directly from the motor terminal box (from tab. F31 to tab. F34) only if the nominal voltage of the brake is the same as the smaller voltage of the motor.

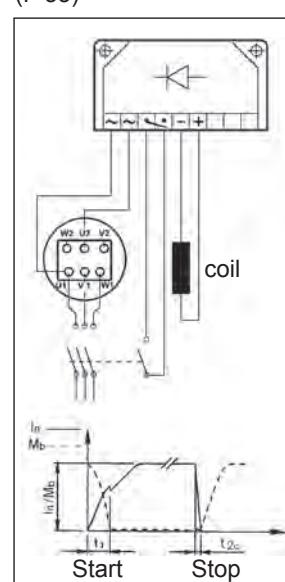

(F 31)

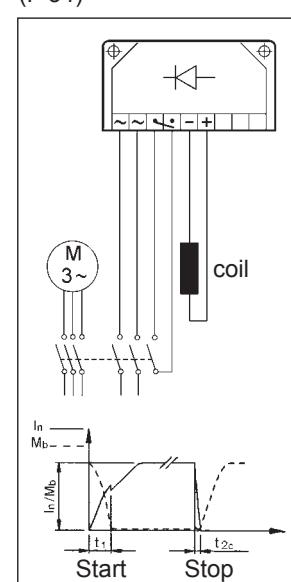

(F 32)

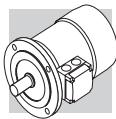

(F 33)

(F 34)

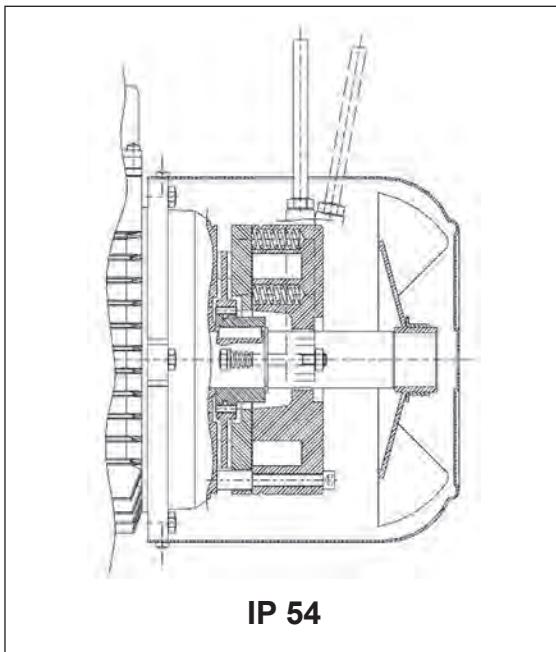

## M7 DC BRAKE MOTORS TYPE BN\_AFD and M\_AFD

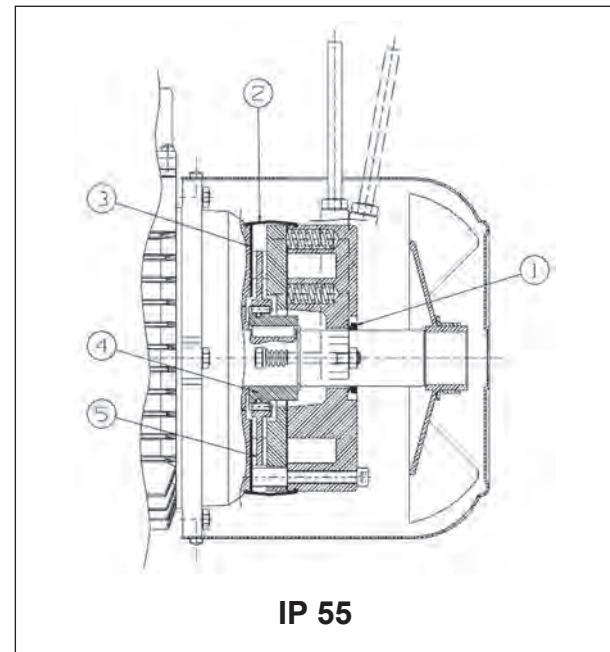

**Frame sizes:** BN 63 ... BN 200L / M05 ... M5

(F 35)

IP 54

(F 36)

IP 55

**Maintenance free up to the maximum permissible wear of brake disc. The air gap of AFD brakes is preset and it does not have to be set**

**Direct current** toroidal-coil electromagnetic brake bolted onto motor shield.

Brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device.

Brake torque factory setting is indicated in the corresponding motor rating charts. Braking torque may be modified by changing the type and/or number of springs.

At request, motors may be equipped with manual release lever with automatic return (**R**) see variant at paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

AFD brakes ensure excellent dynamic performance with low noise. DC brake operating characteristics may be optimized to meet application requirements by choosing from the various rectifier/power supply and wiring connection options available.

The AFD brake is recommended for applications in which it is used as a holding brake.

**For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service.**

### M7.1 Degree of protection

Standard protection class is IP54.

Brake motor AFD is also available in protection class **IP55**, which mandates the following variants:

- ① V-ring at N.D.E. of motor shaft
- ② dust and water-proof rubber boot
- ③ stainless steel ring placed between motor shield and brake disc
- ④ stainless steel hub
- ⑤ stainless steel brake disc

## M7.2 AFD brake power supply

A rectifier accommodated inside the terminal box feeds the DC brake coil. Wiring connection across rectifier and brake coil is performed at the factory.

On all single-pole motors, rectifier is connected to the motor terminal board.

Rectifier standard power supply voltage  $V_B$  is as indicated in the following table, regardless of mains frequency:

(F 37)

2, 4, 6 P		1 speed			
		BN_AFD / M_AFD	$V_{mot}$ ± 10% 3 ~	$V_B$ ± 10% 1 ~	brake connected to terminal board power supply
<b>BN 63...BN 132</b>	<b>M05...M4LB</b>	230/400 V – 50 Hz	230 V	standard	specify $V_B$ SA o $V_B$ SD
<b>BN 160MR</b>	<b>M4LC</b>	400/690 V – 50 Hz	400 V	standard	specify $V_B$ SA o $V_B$ SD

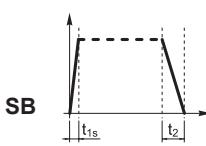

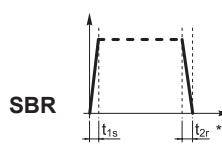

Switch-pole motors feature a separate power supply line for the brake with rectifier input voltage  $V_B$  as indicated in the table below:

(F 38)

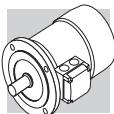

2/4, 2/6, 2/8, 2/12, 4/6, 4/8 P		2 speed			
		BN_AFD / M_AFD	$V_{mot}$ ± 10% 3 ~	$V_B$ ± 10% 1 ~	brake connected to terminal board power supply
<b>BN 63...BN 132</b>	<b>M05...M4LB</b>	400 V – 50 Hz	230 V	—	specify $V_B$ SA o $V_B$ SD

The diode half-wave rectifier ( $VDC \approx 0,45 \times VAC$ ) is available in versions **SB** and **SBR**, as detailed in the table below:

(F 39)

		brake	standard		at request
<b>BN 63</b>	<b>M05</b>	<b>AFD 02</b>			
<b>BN 71</b>	<b>M1</b>	<b>AFD 03</b>			
<b>BN 80</b>	<b>M2</b>	<b>AFD 04</b>			
<b>BN 90S</b>	—	<b>AFD 14</b>			
<b>BN 90L</b>	—	<b>AFD 05</b>			
<b>BN 100</b>	<b>M3</b>	<b>AFD 15</b>			
<b>BN 112</b>	—	<b>AFD 06S</b>			
<b>BN 132...160MR</b>	<b>M4</b>	<b>AFD 06</b>			
		<b>AFD 07</b>			

(\*)  $t_{2c} < t_{2r} < t_2$

Rectifier **SB** with electronic energizing control over-energizes the electromagnet upon power-up to cut brake release response time and then switches to normal half-wave operation once the brake has been released.

Use of the **SB** rectifier is mandatory in the event of:

- high number of operations per hour
- reduced brake release response time
- brake is exposed to extreme thermal stress

Rectifiers **SBR** are available for applications requiring quick brake intervention (braking condition reinstatement) response.

These rectifiers complement the **SB** types as their electronic circuit incorporates a static switch that de-energizes the brake quickly in the event voltage is missing.

This arrangement ensures short brake release response time with no need for additional external wiring and contacts.

Optimum performance of rectifiers **SBR** is achieved with separate brake power supply.

**Versions available:** 230 V ac  $\pm 10\%$ , 400 V ac  $\pm 10\%$ , 50/60 Hz (with power supply); 100 V dc  $\pm 10\%$ , 180 V dc  $\pm 10\%$  (with SD option).

### M7.3 AFD brake technical specifications

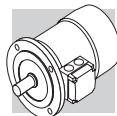

The table below reports the technical specifications of DC brakes AFD.

(F 40)

Brake	Brake torque $M_b$ [Nm]			Air gap		Release $t_{1s}$ [ms]	Braking		W <sub>max</sub> per brake operation [J]			W [MJ]	P [W]
	6	4	2	tin ( $\pm 0.1$ mm)	tmax		$t_2$ [ms]	$t_{2c}$ [ms]	10 s/h	100 s/h	1000 s/h		
<b>AFD 02</b>	—	3.5	1.8	0.3	0.7	20	110	10	4500	1400	160	40	15
<b>AFD 03</b>	7.5	5	2.5	0.3	0.7	35	140	15	7000	1900	210	60	21
<b>AFD 04</b>	15	10	5	0.4	0.8	55	180	15	11000	3100	350	75	27
<b>AFD 14</b>													
<b>AFD 05</b>	40	26	13	0.4	0.8	85	240	25	18000	4500	500	125	37

<b>AFD 07</b>	150	100	50	0.45	0.95	170	350	30	40000	9300	1000	320	55

(\*) depending on the type  
of springs

tin = air gap with new brake disk  
tmax = maximum air gap which is necessary to replace the brake disc  
 $t_{1s}$  = brake release time with over-energizing rectifier  
 $t_2$  = brake engagement time with AC line interruption and separate power supply  
 $t_{2c}$  = brake engagement time with AC and DC line interruption – Values for  $t_{1s}$ ,  $t_2$ ,  $t_{2c}$  indicated in the table are referred to brake set at maximum torque, medium air gap and rated voltage  
 $W_{max}$  = max energy per brake operation  
W = dissipatable braking energy before replacement of brake disc  
 $P_b$  = brake power absorption at 20 °C  
 $M_b$  = static braking torque ( $\pm 15\%$ )  
s/h = starts per hour

The brake pad wear depends on the operating/ambient conditions (temperature, humidity, angular speed, specifica pressure); Therefore the declared wear rate must be considered as indicative.

#### M7.4 AFD brake connections

On standard single-pole motors, the rectifier is connected to the motor terminal board at the factory. For switch-pole motors and where a separate brake power supply is required, connection to rectifier must comply with brake voltage VB stated in motor name plate.

**Because the load is of the inductive type, brake control and DC line interruption must use contacts from the usage class AC-3 to IEC 60947-4-1.**

Table (F41) – Brake power supply from motor terminals and AC line interruption

Delayed stop time  $t_2$  and function of motor time constants.

Mandatory when soft-start/stops are required.

Table (F42) – Brake coil with separate power supply and AC line interruption

Normal stop time independent of motor.

Achieved stop times  $t_2$  are indicated in the table (F40).

Table (F43) – Brake coil power supply from motor terminals and AC/DC line interruption.

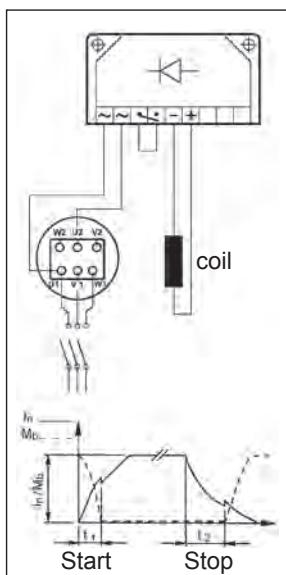

Quick stop with operation times  $t_{2c}$  as per table (F40).

Table (F44) – Brake coil with separate power supply and AC/DC line interruption.

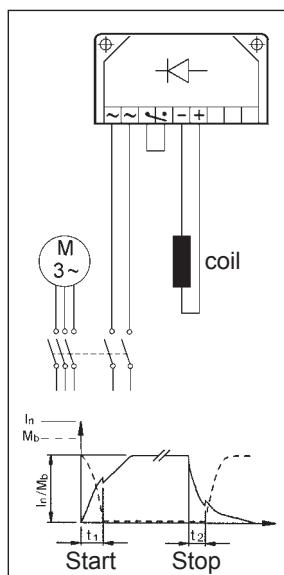

Stop time decreases by values  $t_{2c}$  indicated in the table (F40).

The brake may be voltage supplied directly from the motor terminal box (from tab. F41 to tab. F44) only if the nominal voltage of the brake is the same as the smaller voltage of the motor.

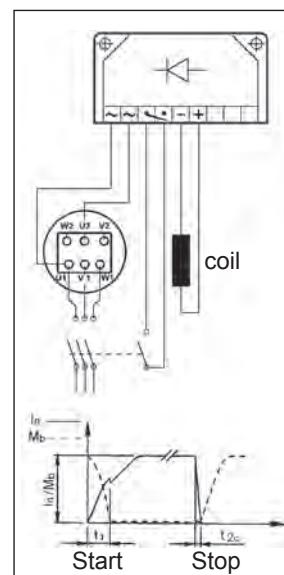

(F 41)

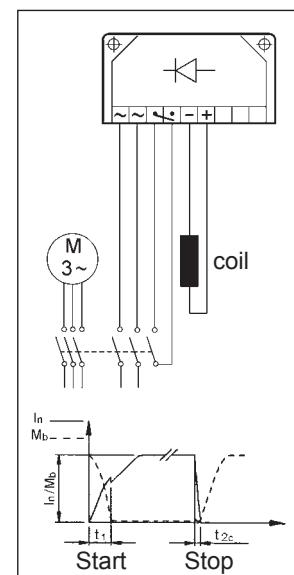

(F 42)

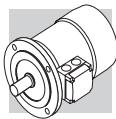

(F 43)

(F 44)

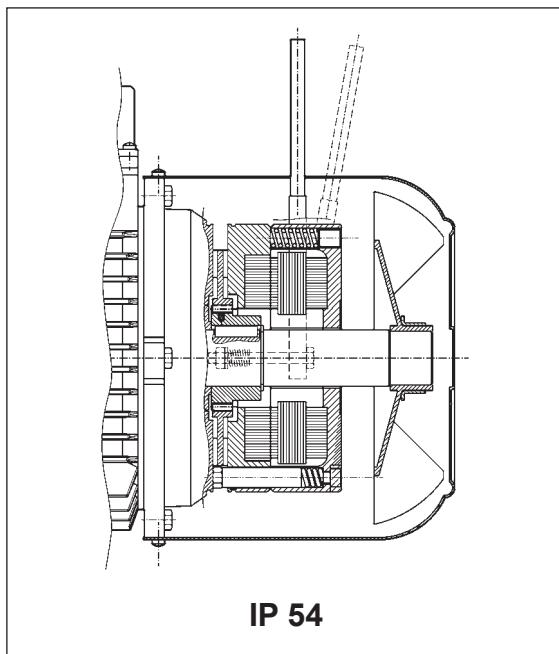

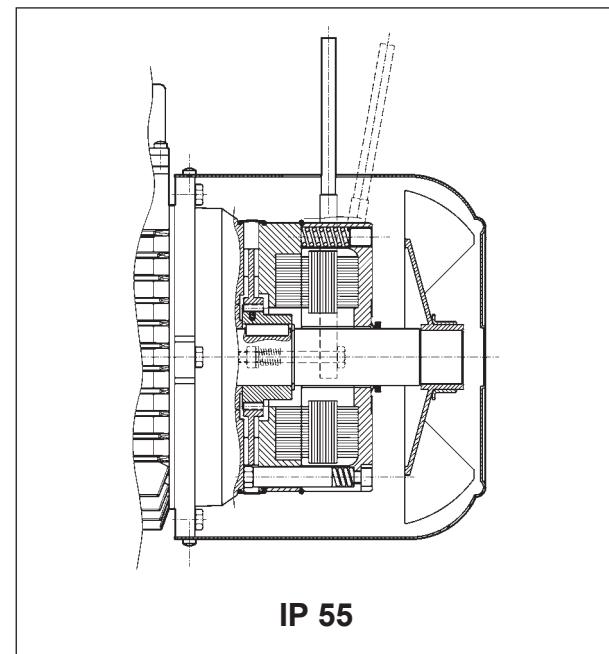

## M8 AC BRAKE MOTORS TYPE BN\_FA and M\_FA

**Frame sizes:** BN 63 ... BN 180M / M05 ... M5

(F 45)

(F 46)

Electromagnetic brake operates from three-phase **alternated current** power supply and is bolted onto conveyor shield. Preloading springs provide axial positioning of magnet body.

Steel brake disc slides axially on steel hub shrunk onto motor shaft with anti-vibration device.

Brake torque factory setting is indicated in the corresponding motor rating charts.

Spring preloading screws provide stepless braking torque adjustment.

Torque adjustment range is  $30\% M_{bMAX} < M_b < M_{bMAX}$  (where  $M_{bMAX}$  is maximum braking torque as shown in tab. (F48)).

Thanks to their high dynamic characteristics, FA brakes are ideal for heavy-duty applications as well as applications requiring frequent stop/start and very fast response time.

Motors may be equipped with manual release lever with automatic return (**R**) at request. See variant at paragraph "BRAKE RELEASE SYSTEMS" for available release lever locations.

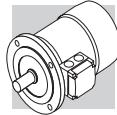

**For applications involving lifting and/or high hourly energy dissipation, contact Bonfiglioli's Technical Service.**

### M8.1 Degree of protection

Standard protection class is IP54.

Brake motor BN\_FA is also available in protection class **IP55**, which mandates the following variants:

- V-ring at N.D.E. of motor shaft
- rubber protection sleeve
- O-ring

## M8.2 FA brake power supply

In single speed motors, power supply is brought to the brake coil direct from the motor terminal box. As a result, brake voltage and motor voltage are the same. In this case, brake voltage indication may be omitted in the designation.

Switch-pole motors and motors with separate brake power supply feature an auxiliary terminal board with 6 terminals for connection to brake line. In both cases, brake voltage indication in the designation is mandatory.

The following table reports standard AC brake power supply ratings for single- and switch-pole motors:

(F 47)

single-pole motor	BN 63...BN 132	BN 160...BN 180
	M05...M4LB	M4LC...M5
	230Δ / 400Y V ±10% – 50 Hz	400Δ / 690Y V ±10% – 50 Hz
	265Δ / 460Y ±10% - 60 Hz	460Y – 60 Hz
switch-pole motors (separate power supply line)	BN 63...BN 132	BN 160...BN 180
	M05...M4	M4LC...M5
	230Δ / 400Y V ±10% – 50 Hz	400Δ / 690Y V ±10% – 50 Hz
	460Y – 60 Hz	

Unless otherwise specified, standard brake power supply is 230Δ /400Y V - 50 Hz.

Special voltages in the 24...690 V, 50-60 Hz range are available at request.

## M8.3 Technical specifications of FA brakes

(F 48)

Brake	Brake torque $M_b$ [Nm]	Release $t_1$ [ms]	Braking $t_2$ [ms]		$W_{max}$ [ J ]			W [MJ]	P [VA]
					10 s/h	100 s/h	1000 s/h		
FA 02	3.5	4	20	4500	1400	180	15	60	
FA 03	7.5	4	40	7000	1900	230	25	80	
FA 04									
FA 14	15	6	60	10000	3100	350	30	110	
FA 05									
FA 15	40	8	90	18000	4500	500	50	250	
FA 06S	60	16	120	20000	4800	550	70	470	
FA 06	75	16	140	29000	7400	800	80	550	
FA 07	150	16	180	40000	9300	1000	130	600	
FA 08	250	20	200	60000	14000	1500	230	1200	

$M_b$  = max static braking torque ( $\pm 15\%$ )

$t_1$  = brake release time

$t_2$  = brake engagement time

$W_{max}$  = max energy per brake operation (brake thermal capacity)

W = braking energy between two successive air gap  
adjustments

$P_b$  = power drawn by brake at 20° (50 Hz)

s/h = starts per hour

NOTE

Values  $t_1$  and  $t_2$  in the table refer to a  
brake set at rated torque, medium air  
gap and rated voltage.

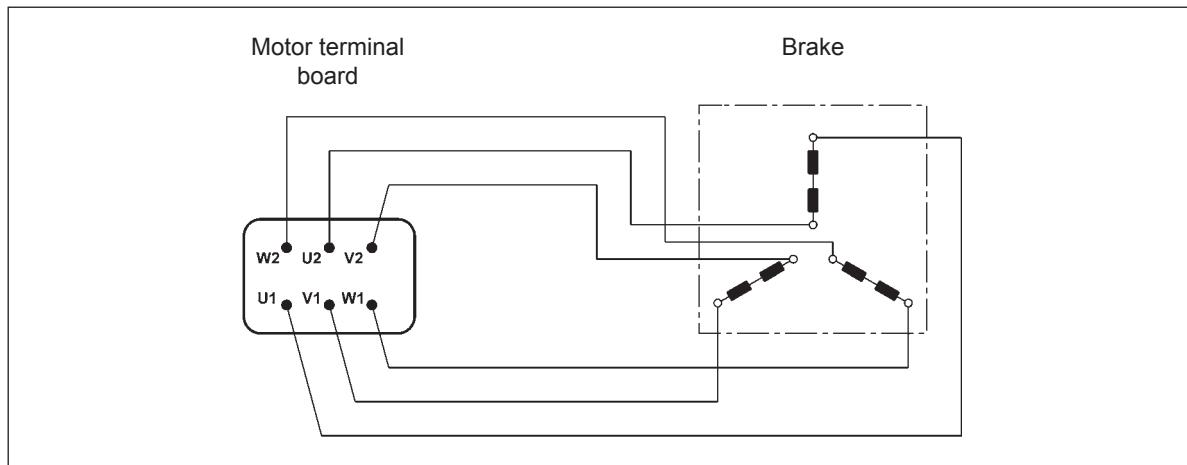

The brake pad wear depends on the operating/ambient conditions (temperature, humidity, angular speed, specifica pressure); Therefore the declared wear rate must be considered as indicative.

#### M8.4 FA brake connections

The diagram (F49) shows the wiring when brake is connected directly to same power supply of the motor:

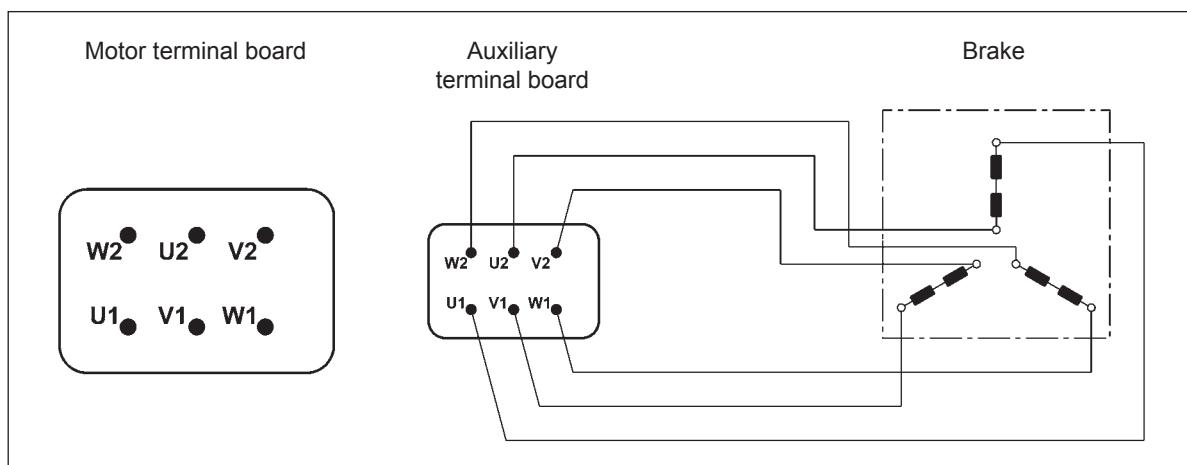

(F 49)

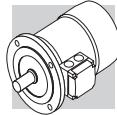

Switch-pole motors and, at request, single-pole motors with separate power supply are equipped with an auxiliary terminal board with 6 terminals for brake connection.

In this version, motors feature a larger terminal box. See diagram (F50):

(F 50)

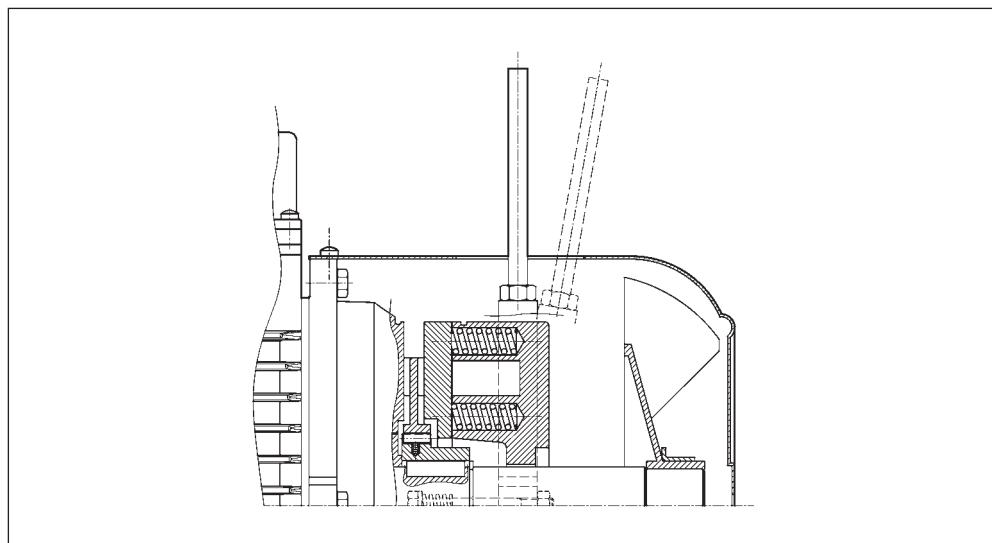

## M9 BRAKE RELEASE SYSTEMS

Spring-applied brakes type FD, AFD and FA may be equipped with optional manual release devices. These are typically used for manually releasing the brake before servicing any machine or plant parts operated by the motor.

(F 51)

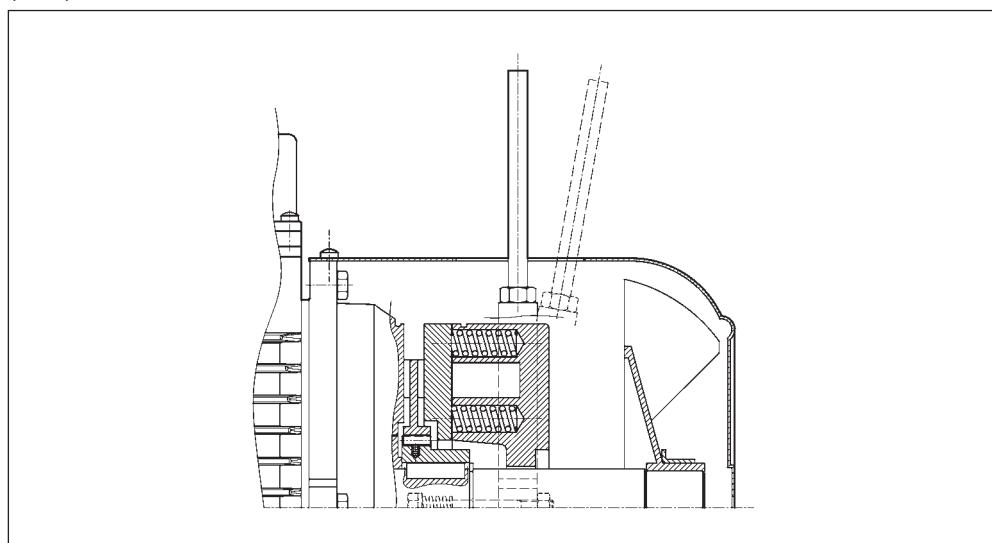

R

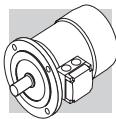

A return spring brings the release lever back in the original position.

(F 52)

RM

On motors type BN\_FD, if the option RM is specified, the release device may be locked in the "release" position by tightening the lever until its end becomes engaged with a brake housing projection. The availability for the various disengagement devices is charted here below:

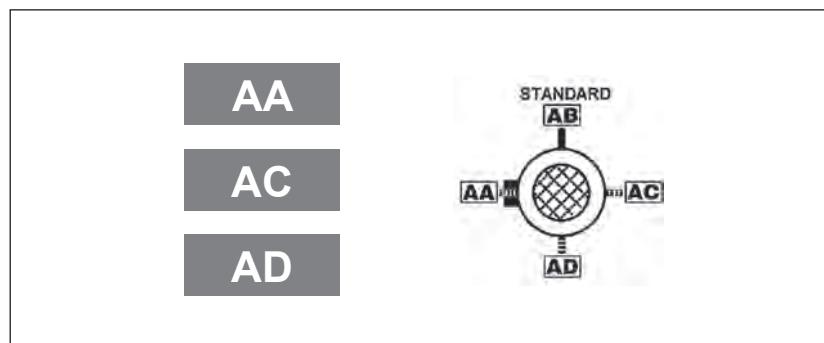

(F 53)

	R	RM
BN_FD	BN 63...BN 200	2p 63A2 ≤ H ≤ 132M2 4p 63A4 ≤ H ≤ 132MA4 6p 63A6 ≤ H ≤ 132MA6
BN_AFD	BN 63...BN 160MR	⊖
M_FD	M 05...M 5	M 05...M 4LA
M_AFD	M 05...M 4LC	⊖
BN_FA	BN 63...BN 180M	⊖
M_FA	M 05...M 5	⊖

### M9.1 Release lever orientation

Unless otherwise specified, the release lever is located 90° away from the terminal box – identified by letters [AB] in the diagram below – in a clockwise direction on both options **R** and **RM**. Alternative lever positions [AA], [AC] and [AD] are also possible when the corresponding option is specified:

(F 54)

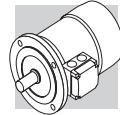

### M9.2 Fly-wheel data (F1)

The table below shows values of weight and inertia of flywheel (option F1). Overall dimensions of motors remain unchanged.

(F 55)

Main data for flywheel of motore type: BN_FD, BN_AFD, M_FD, M_AFD			
		Fly-wheel weight [Kg]	Fly-wheel inertia [Kgm <sup>2</sup> ]
BN 63	M05	0.69	0.00063
BN 71	M1	1.13	0.00135
BN 80	M2	1.67	0.00270
BN 90 S - BN 90 L	-	2.51	0.00530
BN 100	M3	3.48	0.00840
BN 112	-	4.82	0.01483
BN 132 S - BN 132 M	M4	6.19	0.02580

## M10 OPTIONS

### M10.1 Thermal protective devices

In addition to the standard protection provided by the magneto-thermal device, motors can be supplied with built-in thermal probes to protect the winding against overheating caused, by insufficient ventilation or by an intermittent duty.

This additional protection should always be specified for servoven-tilated motors (IC416).

### M10.2 Capacitive filter

**CF**

An optional capacitive filter is available for DC brake motors type BN\_FD and BN\_AFD only. When the suitable capacitive filter is installed upstream of the rectifier (option CF), motors comply with the emission limits required by standard EN61000-6-3:2007 "Electromagnetic Compatibility – Generic Emission Standard – Part 6-3: Residential, commercial and light industrial environment".

### M10.3 Thermistors

**E3**

These are semi-conductors having rapid resistance variation when they are close to the rated switch off temperature (150 °C).

Variations of the  $R = f(T)$  characteristic are specified under DIN 44081, IEC 34-11 Standards.

Positive temperature coefficient thermistors are normally used (also known as PTC "cold conductor resistors").

Thermistors cannot control relays directly and must be connected to a suitable disconnect device.

Thus protected, three PTCs connected in series are installed in the winding, the terminals of which are located on the auxiliary terminal-board.

**K1**

The design characteristics of this sub-group of PTC thermistors allow them to be used as positive temperature coefficient sensors with variable resistance.

Functioning temperature range: 0°C ... +260°C.

Thermistors cannot control relays directly and must be connected to a suitable disconnect device. Terminals (polarised) for 1 x KTY 84-130 are provided on an auxiliary terminal strip.

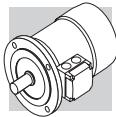

### M10.4 Bimetallic thermostates

**D3**

These types of protective devices house a bimetal disk. When the rated switch off temperature (150 °C) is reached, the disk switches the contacts from their initial rest position.

As temperature falls, the disk and the contacts automatically return to rest position.

Three bimetallic thermostates connected in series are usually employed, with normally closed contacts. The terminals are located on an auxiliary terminal-board.

## M10.5 Plug connector

### CON

Three types of connectors (CON 1, CON 2, CON 3) are provided; they can be mounted in two different positions: right side of terminal box cover (C1D, C2D, C3D); left side of terminal box cover (C1S, C2S, C3S).

The option CON is applicable to single speed BN and M motors (2, 4, 6, 8 poles), and it is not applicable to switch-pole motors. More details about the motor sizes are available in the next table.

The connectors CON 1 / CON 2 are available for BN and M motors without brake and for BN and M brakemotors equipped with DC brake type FD or AFD, for the motor sizes listed below.

**The male connector (with pins) is mounted on the motor, the female connector is not provided. With CON option, the winding connection is always Y.**

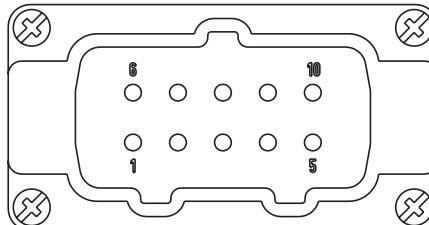

With option U1 "forced ventilation", the fan unit supply is available inside the separate terminal box fixed to fan cover.

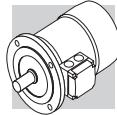

With options EN1...EN6, the encoder connection is made by a cable not connected to the motor plug connector.

The CON option is not applicable to brakemotors equipped with AC brake type FA. The CON option is not available when at least one of the next options are selected: the U2, CUS, IC.

## Specifications

(F 56)

Option	CON 1
Motor size	<b>BN63...BN112 / M05...M3</b>
Connector view	
Type of connector	Harting Han 10ES
Housing	Han EMC 10B with 2 levers
Numbers of pins - nominal current	10 x 16A
Voltage	500 Vac
Contact connection	Screw terminals

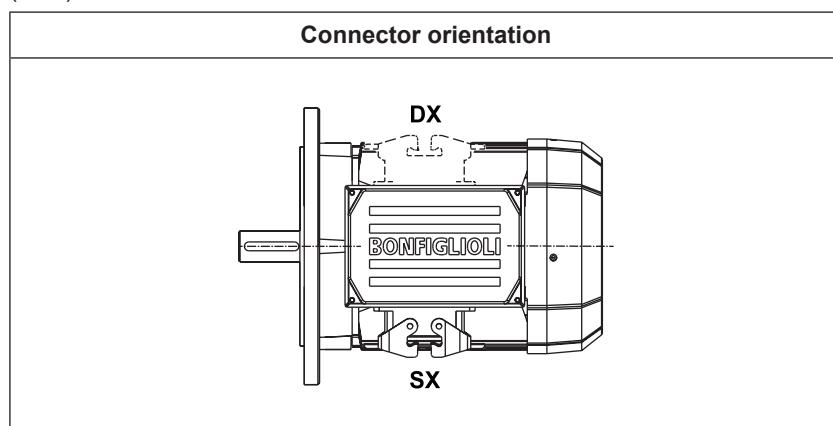

(F 57)

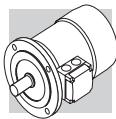

Option	<b>CON 2</b>

## M10.6 Control of brake operation

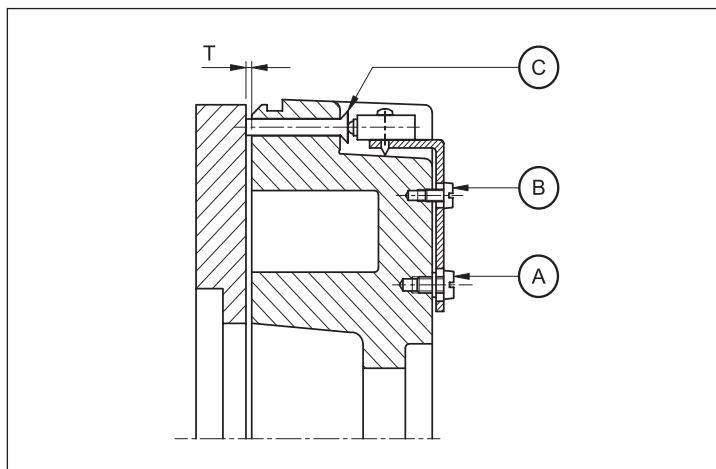

### MSW

The microswitch can be set in order to obtain from it a signal related to the attraction/release of anchor plate, or it can be set in order to give feedback when the air gap reaches the maximum value.

**MSW option is available for brakes FD03...FD09 and AFD03...AFD07.**

The microswitch is provided with three lead wires (NC, NO, COM). The next figure shown the main components of the brake equipped with microswitch.

(F 62)

- A: Plate fixing screws
- B: Setting screws
- C: Actuator control pin

## M10.7 Additional cable entry for brakemotors

### IC

The terminal box cover of brakemotors BN63...BN160MR / M05...M4 is provided with two additional cable entry M16 x 1.5 (one cable entry per side).

The terminal box cover of brakemotors BN160...BN200 / M5 is provided with an additional cable entry M16 x 1.5 next to the cable entry used for the brake.

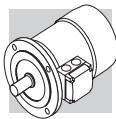

## M10.8 Anti-condensation heaters

### H1

### NH1

Where an application involves high humidity or extreme temperature fluctuation, motors may be equipped with an anti-condensate heater.

A single-phase power supply is available in the auxiliary terminal board inside the main terminal box. Values for the absorbed power are listed here below:

(F 63)

		H1	NH1
		1~ 230V ± 10% P [W]	1~ 115V ± 10% P [W]
<b>BN 56...BN 80</b>	<b>M0...M2</b>	10	10
<b>BN 90...BN 160MR</b>	<b>M3 - M4</b>	25	25
<b>BN 160M...BN 180M</b>	<b>M5</b>	50	50
<b>BN 180L...BN 200L</b>	—		

**Warning!**

Always remove power supply to the anti-condensante heater before operating the motor.

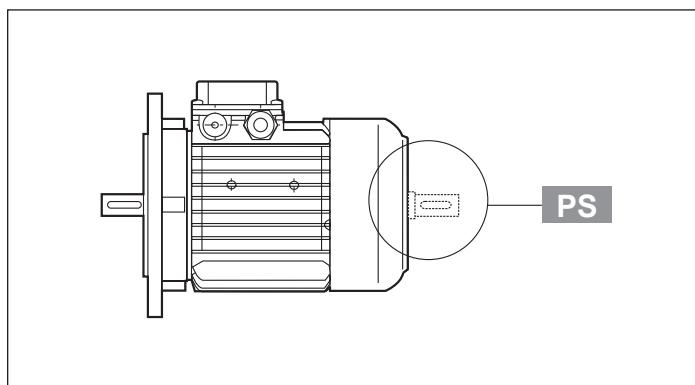

**M10.9 Tropicalization****TP**

When option **TP** is specified, motor windings receive additional protection for operation in high humidity and temperature conditions.

**M10.10 Second shaft extension****PS**

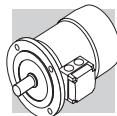

This option is not compatible with variants RC, TC, U1, U2, EN1, EN2, EN3, EN4, EN5, EN6.  
For shaft dimensions please see motor dimensions tables.

(F 64)

**M10.11 Backstop device****AL****AR**

For applications where backdriving must be avoided, motors equipped with an anti run-back device can be used (available for the M series only). While allowing rotation in the direction required, this device operates instantaneously in case of a power failure, preventing the shaft from running back. The anti run-back device is life lubricated with special grease for this specific application. When ordering, customers should indicate the required rotation direction, AL or AR.

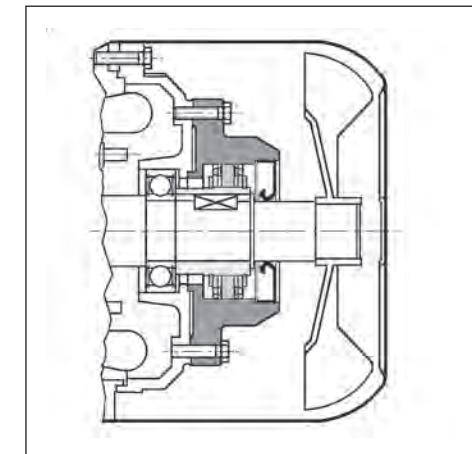

Never use the anti run-back device to prevent reverse rotation caused by faulty electrical connection. Table (F70) shows rated and maximum locking torques for the anti run-back devices. A diagram of the device can be seen in Table (F71). Overall dimensions are same as the corresponding brake motor. The direction of free rotation is described in the "MOTOR OPTIONS" section of specifically dedicated sections to gear units.

(F 65)

	Rated locking torque [Nm]	Max. locking torque [Nm]	Release speed [min <sup>-1</sup> ]
<b>M1</b>	6	10	750
<b>M2</b>	16	27	650
<b>M3</b>	54	92	520
<b>M4</b>	110	205	430

(F 66)

## M10.12 Ventilation

Motors are cooled through outer air blow (IC 411 according to CEI EN 60034-6) and are equipped with a plastic radial fan, which operates in both directions.

Ensure that fan cover is installed at a suitable distance from the closest wall so to allow air circulation and servicing of motor and brake, if fitted.

On request, motors can be supplied with independently power-supplied forced ventilation system starting from BN 71 or M1 size.

Motor is cooled by an axial fan with independent power supply and fitted on the fan cover (IC 416 cooling system).

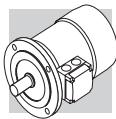

This version is used in case of motor driven by inverter so that steady torque operation is possible even at low speed or when high starting frequencies are needed.

Brake all motors with rear shaft projection (PS option) are excluded.

(F 67)

Power supply					
		V a.c. ± 10%	Hz	P [W]	I [A]
<b>BN 71</b>	<b>M1</b>	1~ 230	50 / 60	22	0.12
<b>BN 80</b>	<b>M2</b>			22	0.12
<b>BN 90</b>	—			40	0.30
<b>BN 100 (*)</b>	<b>M3</b>			50	0.25
<b>BN 112</b>	—			50	0.26 / 0.15
<b>BN 132S</b>	<b>M4S</b>			110	0.38 / 0.22
<b>BN 132M...BN 160MR</b>	<b>M4L</b>	3~ 230 Δ / 400Y	50	180	1.25 / 0.72
<b>BN 160...BN 180M</b>	<b>M5</b>				

This variant has two different models, called **U1** and **U2**, having the same longitudinal size. Longer side of fan cover (**DL**) is specified for both models in the table below. Overall dimension can be reckoned from motor size table.

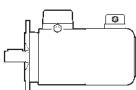

(F 68)

Extra length for servoventilated motors			
		$\Delta L_1$	$\Delta L_2$
<b>BN 71</b>	<b>M1</b>	93	32
<b>BN 80</b>	<b>M2</b>	127	55
<b>BN 90</b>	—	131	48
<b>BN 100</b>	<b>M3</b>	119	28
<b>BN 112</b>	—	130	31
<b>BN 132S</b>	<b>M4S</b>	161	51
<b>BN 132M</b>	<b>M4L</b>	161	51

$\Delta L_1$  = extra length to LB value of corresponding standard motor

$\Delta L_2$  = extra length to LB value of corresponding brake motor

## U1

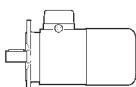

Fan wiring terminals are housed in a separate terminal box.

In brake motors of size BN 71...BN 160MR, M1...M4L, with **U1** model, the release lever cannot be positioned to AA.

The option is not applicable to motors compliant with the CSA and UL norms (option CUS).

## U2

Fan terminals are wired in the motor terminal box.

The **U2** option does not apply to motors BN 160 through BN 200L, M5, with the only exception of motor BN 160MR for which the option is available instead and to motors with option CUS (compliant to norms CSA and UL).

(F 69)

(*)			V a.c. $\pm 10\%$	Hz	P [W]	I [A]
	<b>BN 100_U2</b>	<b>M3</b>	3~ 230 $\Delta$ / 400Y	50 / 60	40	0.12 / 0.09

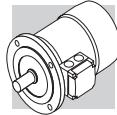

## M10.13 Rain canopy

### RC

The rain canopy protects the motor from dripping and avoids the ingress of solid bodies. It is recommended when motor is installed in a vertical position with the shaft downwards.

Relevant dimensions are indicated in the table below.

The drip cover is not compatible with variants PS, EN1, EN2, EN3, EN4, EN5, EN6.

(F 70)

		AQ	$\Delta V$	
<b>BN 63</b>	<b>M05</b>	118	24	
<b>BN 71</b>	<b>M1</b>	134	27	
<b>BN 80</b>	<b>M2</b>	152	25	
<b>BN 90</b>	—	168	30	
<b>BN 100</b>	<b>M3</b>	190	28	
<b>BN 112</b>	—	211	32	
<b>BN 132...BN 160MR</b>	<b>M4</b>	254	32	
<b>BN 160M...BN 180M</b>	<b>M5</b>	302	36	
<b>BN 180L...BN 200L</b>	—	340	36	

#### M10.14 Textile canopy

##### TC

Option TC is a cover variant for textile industry environments, where lint may obstruct the fan grid and prevent a regular flow of cooling air.

This option is not compatible with variants EN1, EN2, EN3, EN4, EN5, EN6.

Overall dimensions are the same as drip cover type RC.

#### M10.15 Feedback units

Motors may be combined with six different types of encoders to achieve feedback circuits.

Configurations with double-extended shaft (PS) and rain canopy (RC, TC) are not compatible with encoder installation.

##### EN1

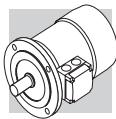

Incremental encoder,  $V_{IN} = 5 \text{ V}$ , line-driver output RS 422.

##### EN2

Incremental encoder,  $V_{IN} = 10-30 \text{ V}$ , line-driver output RS 422.

##### EN3

Incremental encoder,  $V_{IN} = 12-30 \text{ V}$ , push-pull output 12-30 V

## EN4

Encoder sin/cos,  $V_{IN} = 4.5\text{-}5.5 \text{ V}$ , output Sinus 0.5V<sub>PP</sub>.

## EN5

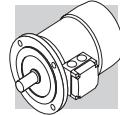

Absolute encoder singleturn, HIPERFACE® interface,  $V_{IN} = 7\text{-}12 \text{ V}$ .

## EN6

Absolute encoder multturn, HIPERFACE® interface,  $V_{IN} = 7\text{-}12 \text{ V}$ .

(F 71)

	EN1	EN2	EN3	EN4	EN5	EN6			
Interface	TTL/RS 422	TTL/RS 422	HTL/push-pull	Sinus 0.5 V <sub>PP</sub>	HIPERFACE®	HIPERFACE®

<b>BN 180L_FD...BN 200L_FD</b>	-	<b>41</b>

If the encoder device (option EN\_) is specified on motors BN71...BN160MR / M1...M4, along with the independent fan cooling (options U1, U2), the extra length of motor is coincident with that of the correspondent U1 and U2 execution.

## M10.16 Surface protection

### C\_

When no specific protection class is requested, the painted (ferrous) surfaces of motors are protected to at least corrosivity class C2 (UNI EN ISO 12944-2). For improved resistance to atmospheric corrosion, motors can be delivered with C3 and C4 surface protection.

SURFACE PROTECTION	Typical environments	Maximum surface temperature	Corrosivity class according to UNI EN ISO 12944-2
<b>C3</b>	Urban and industrial environments with up to 100% relative humidity (medium air pollution)	120°C	C3
<b>C4</b>	Industrial areas, coastal areas, chemical plant, with up to 100% relative humidity (high air pollution)	120°C	C4

Motors with optional protection to class C3 or C4 are available in a choice of colours. If no specific colour is requested (see the "PAINTING" option) motors are finished in RAL 7042.

Motors can also be supplied with surface protection for corrosivity class C5 according to UNI EN ISO 12944-2. Contact our Technical Service for further details.

## M10.17 Painting

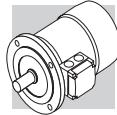

### RAL\_

Gearboxes with optional protection to class C3 or C4 are available in the colours listed in the following table.

PAINTING	Colour	RAL number
<b>RAL7042*</b>	Traffic Grey A	7042
<b>RAL5010</b>	Gentian Blue	5010
<b>RAL9005</b>	Jet Black	9005
<b>RAL9006</b>	White Aluminium	9006
<b>RAL9010</b>	Pure White	9010

\* Gearboxes are supplied in this standard colour if no other colour is specified.

NOTE – "PAINTING" options can only be specified in conjunction with "SURFACE PROTECTION" options.

---

## M10.18 Certificates

**ACM**

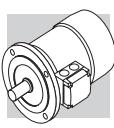

### **Certificate of compliance of motors**

The document certifies the compliance of the product with the purchase order and the construction in conformity with the applicable procedures of the Bonfiglioli Quality System.

**CC**

### **Inspection certificate**

The document entails checking on order compliance, the visual inspection of external conditions and instrumental testing of the electrical characteristics in unloaded conditions. Units inspected are sampled within the shipping batch and marked individually.
